Supply Chain & Transportation Monitoring

CASE STUDY

The Details

Client

Specializes in making products that aid with tracking and reporting of incidents that occur during product shipment or use - such as shock, temperatures, and vibration.

Profile

Multi-site, multi-country company with hundreds of employees in the US and across the world (62 countries). Distributes and provides consulting and support services for its products.

Challenges

Business processes were decentralized across multiple systems including Salesforce and CSR. Spreadsheets were used in critical business processes, hindering efficiency, transparency, and accuracy.

The Vested Group Delivers

Solutions

- NetSuite: Manufacturing, Operations, Financials, and Supply Chain
- Spreadsheet supported processes were moved to ERP
- Integrated Ozlink by Descartes
- Complete WMS application to support R2 auditing for reverse logistics
- Real-time visibility of all critical business processes

Results

- Access to real-time data empowered much quicker decision making
- Decreased process flow times
- Significantly increased data accuracy, reducing errors and corrections.
- Enabled IT staffing to shift focus to shift from 'just holding everything together' to gaining operational efficiencies
- Simplified and streamlined month-end processes to reduce month-end close time.

The Decision

The client was looking to unify CRM, Salesforce Automation, Supply Chain, Manufacturing, Operations, and Financials processes into one ERP system.

With the client's global presence, NetSuite One World implementation was the best choice.

Why Oracle + NetSuite

The logo for Oracle NetSuite Solution Provider, featuring the word "ORACLE" in red, "NETSUITE" in black, and "Solution Provider" in a smaller black font, all within a light blue circle.

ORACLE®
NETSUITE
Solution Provider

After reviewing several ERPs, the client was looking for a system that would track costs associated with materials, labor, and overhead accurately for their products as they passed through various routings.

With standard costing, it helped their organization track and manage cost variances. The client also had multiple intercompany arms-length transactions between their subsidiaries which were facilitated using NetSuite's intercompany functionality.

With NetSuite, all transactions and KPIs are visible to executives who are now armed with the necessary information to lead the company to new growth. Real-time visibility covered nearly every requirement. Additionally, NetSuite's unparalleled flexibility allowed tailored solutions to meet the client's exact needs.

Why The Vested Group

The Vested Group demonstrated experience and transparency, earning the client's trust, and facilitating the type of strategic partnership crucial to a company's long term success.

The Vested Group team raised several issues the client had not considered further showcasing our position as trusted advisors familiar with roadblocks and change management challenges. One of the ways The Vested Group goes above and beyond, includes engaging Delivery resources with clients prior to signing the statement of work.

The Project and Results

The Vested Group and client used the waterfall approach in project management ensuring dependencies were adequately addressed before progressing in the project. Through mutual collaboration, The Vested Group took the client live, operationally hitting the ground running on day one.

The client was able to maintain a fast pace due to The Vested Group's streamlined solution design. The client was thrilled with the final product and the team they worked with, and they continue to leverage The Vested Group for ongoing support with a queue of ongoing projects aimed to further optimize processes and gain efficiencies.
