Office 365

COVID-19 ATTESTATION APP

*Simplify the process with tools that exist inside your Office 365 suite*

As COVID-19 continues to be a part of our daily life, many businesses, healthcare organizations, government offices, and educational institutions now require personal guarantees that individuals are free of the virus. For this purpose, organizations are requiring that individuals complete attestation forms, certifying that they are not suffering from COVID-19 symptoms, have not been exposed to anyone with the virus, or have properly quarantined according to local mandates.

DynTek simplifies this process by helping you quickly and easily develop a COVID-19 Attestation Application using the tools that exist inside your Office 365 suite. Using Office 365 Power Apps and Power Automate, we can create a form to capture individuals' information and store it in a repository inside of Office 365. The data can then easily be made available for later reference or for complying with contact tracing requirements.

Once created, users receive a URL to the Attestation App that they can bookmark on their mobile phone.

Users can then click a button to launch the app, answer a few screening questions, and submit their responses. Depending on the answers to the screening questions, the app will tell the user whether it is okay to report to work or school. The app captures the information in a log and sends an email to a distribution list that says the individual is cleared to report. The data stays in your tenant, so the users' healthcare data never leaves your ownership.

Complying with attestation requirements has never been easier. Contact us for more information on how DynTek can help you set up your customized COVID-19 Attestation Form App.
