

zellige | Farrow and Ball

clé zellige is as traditional as it gets: made and glazed by hand, then fired in traditional kilns, just as it has been done for thousands of years. the science behind the firing produces not only a glorious gloss and surface texture, but also a wildly natural color variance. this is a characteristic of true zellige, and is to be expected and embraced. however, we realize that might present difficulties in selecting a paint partner for your zellige installation, so we have paired our most popular zellige colors with a paint color from farrow + ball that best complements the overall colors and tones found in each tile.
