Challenge

One of the main challenges at Baker Tilly in Germany is the standardization versus agility paradigm. Standardized processes help to become predictable, increase audit quality and help to manage risk. However, you need a level of flexibility to support the needs of individual clients and embrace a work environment that offers diverse, challenging and impactful work. In an ideal world, you don't want to make compromises. How do you become more efficient, while increasing audit quality in an environment that is appealing to the modern workforce?

We are now able to perform an entire audit procedure, in the same time a manager would normally review it. Our efficiency increase is significant. We have more time to focus on high-risk areas, increasing the audit quality for our clients.
Martin Uebelmann, Partner at Baker Tilly

Solution

The vision behind Baker Tilly's solution is simple. Automate and scale repetitive tasks with machine intelligence, while humans stay in control. Releasing the pressure, creating more valuable time for auditors to focus on what they love most —analyzing exceptions and advising clients. To build towards this vision, Baker Tilly in Germany introduced DataSnipper in their audit procedures. DataSnipper is an intelligent audit platform within Excel that improves the speed and quality of your audit. It automates repetitive tasks in tests of details, tests of controls, walkthroughs, contract reviews and other audit procedures.

Value

After piloting DataSnipper in Baker Tilly's team, three main values were defined:

Time saved

40-50% time saved on repetitive audit tasks with intelligent automation

Improved quality

Increased time to spend on analyzing high-risk areas, leads to overall higher audit quality

Innovative culture

Auditors can focus on the work they love, improving overall work culture and employee retention.

Give your auditors superpowers

Ready for intelligent automation to maximize your audit efficiency and quality?
