

A Methodology for Consensus and Results

Delivering value to the bottom line

An **ECMECOSYSTEM®** assessment provides a clear action plan to help you reach business objectives, meeting growth demand, delivering operational efficiencies, and achieving direct savings through automation. It includes on-site business process analysis, enterprise business process design, and IT system design. Documented recommendations, timelines, and milestones provide a strategic, tangible road map to deliver repeatable value with current ECM, Business Process Automation, and Digital Transformation objectives.

Move forward with your strategy in confidence

ImageSource uses the trademarked **ECMECOSYSTEM®** methodology to advise, create workable plans, implement and support technology solutions for organizations globally for more nearly 30 years. Utilizing our decades of expertise across platforms and technologies and our experience creating the ILINX platform, we help improve critical business processes, manage data, content in any form, and integrate critical business

Your executable action plan

Plan Objective

We will provide your organization with a road map that outlines high-value

Processes and data utilization strategies that either drive growth or drive down incurred costs and show you how to improve both. The

ECMECOSYSTEM® analysis will define key factors for successful implementations, so the result meets or exceeds expectations.

	PROCESS	TECHNOLOGY
Phase 1 Discovery	Line-of-Business Interviews	IT Interviews
Phase 2 Analysis	Business Challenges	Technology Operations
Phase 3 Report Generation	Line-of-Business Future State	IT Future State
Phase 4 Customer Validation Final Presentation	Business Case	

Process Summary

The first part of the three essential elements provided in the Process Summary will yield insight into your current processes. Second, it produces recommendations for improvement based on industry best practices and benchmarking. Third, it will provide you with business cases for project justification including ROI.

Technical Report

Defines business and technical requirements, and outlines steps to departmental or enterprise deployment. Investment return findings can be used to prioritize key departments and processes to target for operational improvements.
