retruster.

Protecting businesses against today's increasing threats in a seamless, effective and intuitive way

Retruster

Retruster is a purpose-built, next-generation email protection solution, leveraging the latest technology, including Artificial Intelligence, to proactively alert users to potential risks within emails.

Attackers are becoming more and more advanced and are able to monitor what existing email security solutions are able to detect, allowing them to adapt their own attacks to prevent detection.

Understandably, end users trust an email when it is delivered to their inboxes as they know it has passed through the corporate email security and therefore, in the eyes of the user, these emails are clean.

With 91% of cyber attacks starting with a phishing email

With 91% of cyber attacks starting with a phishing email, it is vital to provide a layered approach to email security as many malicious attacks pass through existing email security solutions because there is no malware to detect.

Retruster analyses emails for a range of different threats, such as CEO Fraud and phishing, but instead of blocking emails from getting to the user, it warns users of potential risks in each email. This ensures the user does not miss important emails blocked as false positives.

Microsoft 365

Google Workspace

Retruster is integrated into Microsoft 365 and Google Workplace and no emails are routed through the solution, allowing it to operate in tandem with existing email security solutions, adding a new layer of protection around email.

How Retruster protects users

Retruster processes each email through its AI engine to detect specific "triggers" inside the email and thus this "triggers" warnings to the user, making them aware of the potential threats contained within.

The AI assesses elements such as the time and timezone the email was sent from, the route the email took to get to the user, whether the sender is new to the user or if the email was sent from a free email service. Retruster also looks at the contents of the email to detect malicious intent, such as CEO Fraud or other types of attacks.

Once these checks are complete, it displays the alerts in a sidebar, allowing users to see threats in every email that is opened.

Features:

- 24/7 user-facing visible protection
- Clear and concise guidance for end users
- Over 98% reduction in clicks on phishing emails
- Integrates with Microsoft 365 and Google Workspace
- Supports Cloud, On Prem and Hybrid

Benefits:

- No settings changes for DNS or MX records
- No emails are routed through Retruster
- No disruption
- Significantly improved cyber-security posture
- Monthly billing per user with automated reporting
