

Safe-t

Grant External Users with Secure Access to Your Services

ZoneZero® SDP

Safe-T's ZoneZero SDP (Software Defined Perimeter) changes the way organisations grant secure external access to their services. This product is part of the ZoneZero Perimeter Access Orchestration platform that provides central management of all secure access technologies and helps organisations achieve Zero Trust Network Access (ZTNA).

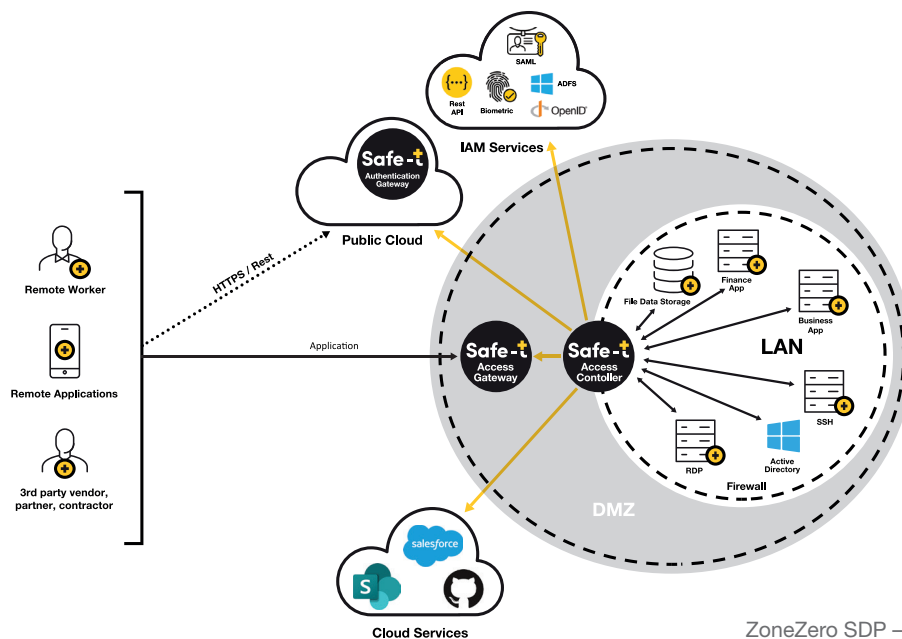

ZoneZero SDP offers secure and transparent access for all types of entities (people, applications, and connected devices) to any internal application, service, and data, such as HTTP/S, SMTP, SFTP, SSH, APIs, RDP, and WebDAV. ZoneZero SDP implements Safe-T's patented reverse-access (outbound) technology which eliminates the need to open incoming ports in the organisation's firewall.

Features

- Based on Safe-T's patented Reverse Access
- Non-web protocols ready – SMB, RDP, SSH
- Cloud and on-premises implementations

Benefits

- Clientless – seamless implementation
- Works in parallel with existing technologies (VPN)
- Scales precisely according to usage

ZoneZero SDP – Classic cloud deployment
