

# ReNew

KiZAN Customer Success Story

## KiZAN utilizes Microsoft funds to successfully implement Power BI and Power Platform Environments for senior housing REIT.

ReNew is a privately held company investing in independent living, assisted living, and memory care communities. ReNew's mission is to improve the quality of community-based living for seniors by fostering relationships with best-in-class operators of seniors housing. ReNew is headquartered in Toledo, OH, and invests in private-pay seniors housing across the U.S.

### Challenge:

GLC ReNew Advisor's BI environment was not configured to best practices, leading to data and logic duplication which prevented expansion. The organization opted to implement a new, extensible BI solution that would provide benefits today and into the future. KiZAN technologies was selected to deploy and provide training on Power BI, the industry-leading business intelligence and analytics solution from Microsoft.

### Approach:

KiZAN's Advanced Analytics Group deployed a Power BI and Power Platform environment that was aligned with security and compliance requirements and general best practices. Additionally, the Advanced Analytics Group built a framework for ingesting Yardi data into Power BI datasets which also allowed for the creation of datasets based on Yardi data.

To facilitate the adoption of Power BI, KiZAN delivered a Dashboard in a Day workshop to the development and administrative teams.

Funding from the Microsoft Azure DPI30 program was available to help reduce the upfront investment cost and the project was delivered in less than 2 months

Power BI

Power Apps

Power Automate

Power Virtual Agents
