

KIDSTRONG® INFINITY DOOR TRAINING SYSTEM

INSTALLATION GUIDE

WHAT'S INCLUDED:

- A. (1) R Infinity Door Frame Bracket (labeled "R")
 - B. (1) L Infinity Door Frame Bracket
 - C. (1) Pull-up bar
 - D. (1) Attachment bar
 - E. (14) Installation screws
- + PLUS your selected attachment(s) and one pair of carabiner clips

TOOLS NEEDED:

- 1/8 inch drill bit
- Power drill
- Phillips head screwdriver (power screwdriver preferred)

STEP ONE:

Put your handyman pants on and unpack your KidStrong® Infinity Door Training System. Lay out the pieces on the floor as you bask in the glory of the journey ahead. Identify which door frame you plan to install your Infinity Door on. This door will be known as the "chosen one."

STEP TWO:

While flexing your muscles, hold the L Infinity Door Frame Bracket (B) flush with the top left corner of your door frame. Drill a hole through the middle screw hole in the bracket into the frame of your door.

STEP THREE:

Insert one of the installation screws (E) into the pre-drilled hole and tighten with your power screwdriver. Make sure to scream "Kaboom!" after every successful screw is secured in place. Your family will love this.

STEP FOUR:

Pre-drill the remaining 6 screw holes for your L bracket (B). Insert and tighten the installation screws (E). Left side dominated.

STEP FIVE:

Hold the R Infinity Door Frame Bracket (A) flush with the top right corner of your door frame. Drill a hole through the middle screw hole in the bracket into the frame of your door. You should remember this step from like 3 minutes ago.

STEP SIX:

Insert one of the installation screws (E) into the pre-drilled hole and tighten with your power screwdriver. Again, this is round #2 for you.

STEP SEVEN:

Pre-drill the remaining 6 screw holes for your R bracket (A). Insert and tighten the installation screws (E). Don't forget the "Kaboom!"

STEP EIGHT:

Insert the Attachment Bar (D) through the top rear hole in the R Infinity Door Frame Bracket (A). Then slide the Attachment Bar (D) through the top rear hole in the L Infinity Door Frame Bracket (B). Hold down the outer pin to guide the bar through the hole, then release to lock the bar in place. When properly installed, the Attachment Bar (D) should rotate in place, but not slide side to side. The Attachment Bar (D) can be moved to any of the bar heights on the Infinity Door Frame Brackets, but the optimal location for most attachments and user heights will be in this top location.

STEP NINE:

Insert the Pull-up Bar (C) through the top front hole in the R Infinity Door Frame Bracket (A). Then slide the Pull-up Bar (C) through the top rear hole in the L Infinity Door Frame Bracket (B). Hold down the outer pin to guide the bar through the hole, then release and rotate until the bar locks into place. When properly installed, the Pull-up Bar (C) should not rotate or slide side to side. The Pull-up Bar (C) can be moved to any of the bar heights on the Infinity Door Frame Brackets.

STEP TEN:

Time to gather the family around to marvel at your achievement of epic proportions. Insert the two carabiners into the holes on the Attachment Bar (D) at desired spacing. Securely fasten your KidStrong Infinity Door Training System attachment to the carabiners prior to use.

CONGRATULATIONS! YOU'RE NOW READY TO ENJOY YOUR KIDSTRONG INFINITY DOOR TRAINING SYSTEM!

PARENTAL SUPERVISION REQUIRED AT ALL TIMES*

*THIS INCLUDES SOME ADULTS WHO THINK THEY ARE STILL KIDS
