

Star-Plus

Scalable, flexible, and intuitive point-of-sale for your pharmacy.

Every RMS system comes standard with advanced tools built to help you run a more profitable and customer-centric pharmacy. Our holistic approach includes software, training, hardware and 24-hour US-based customer service.

Standard Integrations

Pharmacy System Integrations

RMS systems integrate with over 30 different pharmacy systems. You'll never be charged for switching pharmacy system providers and you'll always have the freedom to choose the integration, and the partner, that works best for you.

NutriButler by RMS

Make supplement recommendations based on prescription induced nutrient depletion. Using RMS and one of our natural medicines partners, you can receive supplement information at the register, allowing you to counsel patients on use of the right supplements to improve outcomes and overall wellness.

Payment Acceptance

RMS makes credit card processing crazy-easy. With our RMSPay application, you'll find options for end-to-end encryption, validated point-to-point encryption, built in FSA card acceptance, EMV, and NFC functionality.

Will Call Management

Streamline prescription sales and reduce the risk of errors by taking advantage of built in will-call management solutions. Batch multiple prescriptions into a single bag. Then, scan a single barcode at checkout to add all prescriptions to the transaction.

eCommerce Integrations

With RMS' integration with Pointy, products you sell are automatically uploaded for display on Google so shoppers can see what you sell and come into the store to complete the purchase. There's no extra data entry, no additional hardware, and best of all... no additional charge for use of the integration.

24Seven
Commerce

With RMS' integration with 24SevenCommerce, you can create an online web-store that's connected to your point-of-sale system and sell your products on platforms like eBay, Shopify and more, while your POS system synchronizes products, stock, customers, orders and product categories.

More Great Standard Features Include:

- Electronic Signature Capture
- Cash Management
- Robust Reporting
- Promo Management
- Employee Management
- Product Management
- ...and so much more!

Mobile Solutions

Meds-to-Beds

The EvolutionPOS V2 tablet is the solution for meds-to-beds programs. Run full transactions bedside with the full power of your RMS POS system. This robust meds to beds solution can help you to improve adherence, reduce readmittance rates and drive sales through your outpatient pharmacy.

Drive-Thru

For pharmacies operating from a drive-thru window, wireless signature capture is the solution to easily capture required signatures during the transaction. A simple, but useful solution to troublesome cables or paper signatures.

Delivery

The RMS home delivery application removes complications from the delivery process. Prepare transactions in the pharmacy, process payments or mark them for collection and load everything onto a PDA. Signatures are captured in an offline mode and transactions are automatically synced when your driver returns to the pharmacy.

Curbside

A powerful solution for any business. Curbside programs allow pharmacies to expand their reach and provide a convenient and safe customer experience. Scan items, process payments, capture signatures and print or email receipts in one streamlined interaction using the EvolutionPOS V2 Tablet.

Add-On Modules

The RMS system is scalable and fully customizable. Add the modules you need now, or as your pharmacy grows!

Accounts Receivable

Integrated A/R simplifies your house charge process. Process charges and take payments at the till. Review customer account detail and print aging reports from any RMS workstation. When it's time to run statements, an easy to use wizard will walk you through the process and you can print/ email from there.

Basic Inventory Control

For pharmacies that are looking to streamline OTC purchasing and receiving processes, basic inventory control has everything you need. You'll get automated price updates from your wholesaler, automatically re-order sold items with replenishment ordering with electronic order transmission and easily receive orders into stock.

Advanced Inventory Control

Adding on to the functionality of basic inventory control, advanced inventory control brings some key features for more granular management of OTC products. Advanced inventory control allows you to fine tune product ordering based on min/max quantities, manage inventory counts and more with a wireless device and order intelligently based on vendor minimums.

Customer Loyalty

Increase customer retention through a customer loyalty program. Implement at the register, mailed, or emailed rewards. Coupons for future purchases can also be emailed, mailed, or printed right on the receipt. Create special promotions for loyalty members and recognize your most loyal customers with loyalty levels.

Multi-Store/Centralized Management

Choose from two options for managing multiple locations. Multi-Store is built for 2-5 locations looking for features like shared A/R & Loyalty accounts, easy reporting, and inventory transfer. For larger organizations, or pharmacies looking for full centralized management, the Star-Plus system can be connected to the Star-Link enterprise level management system. There's no limit to the number of locations that can be connected. Visit www.rm-solutions.com/starlink for more details.

Signs & Labels

A great addition to basic or advanced inventory control, Signs & Labels allows you to print labels and product signage right from your point-of-sale system. Print update labels just for the products you carry, saving time and materials. You can also create promotional signage highlighting promotions and compare and save labels for your private label OTC's.

Support

All RMS customers have access to 24x7 support.
