

Field Services

Corrosion Specialists in FRP and Coatings Services

FRP Services

- Routine Maintenance • Leak Repair

Our chemical plant maintenance technicians can complete any repair or installation task while following your company's procedures and strict safety requirements. Whether you need an immediate leak repair or are just pursuing routine maintenance, our environmental coatings and tank linings help with corrosion control and reduce downtime. We also can assist you with new FRP installations.

Concrete Coatings & Repair Services

- On-Site Inspections • Protection & Restoration

Concrete coatings protect new concrete or repair damaged concrete caused by leaks, spills, and other chemical-related problems. Enduro supplies and installs reinforced and non-reinforced concrete toppings, coatings or linings. Our field services personnel provide site inspection and assessments to offer a solution, using premium grade resins geared specifically for your applications. These application-specific solutions lead to extended service life for your equipment and significant cost savings.

Safety & Quality Compliance

- Surpassing Industry Standards • Quality Assurance

At Enduro, safety is our number one priority. Enduro field service crews have a very impressive safety record, constantly striving to and succeeding in surpassing industry standards, achieving over 11+ years OSHA Incident Free. Our field service technicians are OSHA 10 certified, qualified secondary bonders, and certified thermoplastic welders. We provide quality control through a variety of tests, including spark testing, raw material inspection, dimensional validation, and third-party independent validation.

Safety Training
