

Vforge, Inc.

Jon Young, General Manager

“What we liked most about how AlertMeter® aligned with our philosophy of the workforce was that culturally it was a shift in how we respected the employee and their well-being, and the regard for their safety when they came to work. And that is a different message and tone than the options we had in drug testing.”

Pinnacol Assurance

Jim McMillen, Director of Safety Services

“AlertMeter® is an excellent tool for businesses looking for a real-time impairment testing solution . . . In the age of recreational marijuana, prescription drugs, alcohol use and workplace fatigue, determining an employee’s cognitive ability and readiness for work has become complex and often requires more than a drug testing program alone.”

Vforge, Inc.

Ed Marz, Employee

“I believe everybody 100% agrees with the AlertMeter® over random UA testing. This takes everybody maybe two, three minutes in the morning, and it's a done deal.”

Mike Quinn, Safety & Health Professional

“What you guys are doing is like going from the Model T straight to the Tesla Roadster when comparing current urinalysis and breathalyzer testing to your product.”

Prudential Stainless & Alloys

Gary Ostermueller, General Manager

“Our initial concern was two-fold: workers reporting without an adequate amount of sleep as well as a defense against substance impairment.

We found the AlertMeter® to satisfy both of our needs. An added benefit has been that since the employees know they will be tested daily they are reporting to work in a better condition and ready to go to work.”
