

We help accelerate your research and drug development projects!

Svar Life Science has over 15 years' experience working with cell-based assays. In addition to our assay ready off-the-shelf products, we have developed custom cell lines for a wide range of biopharmaceutical targets. We combine the flexibility of a small company with the knowledge and capacity of a large one and can offer versatile cell-based assay solutions to pharma, biotech and CRO customers.

Assay Ready Cell

We develop assay ready cells from sponsor-provided cell lines or cells from other cell line providers

Master Cell Bank Development

Get your own proprietary *iLite*[®] master cell bank and benefit from a new level of traceability and sustainability

***iLite* Custom Cell Line Development**

We create custom *iLite* cell lines for your target of choice, tailored to your needs with all the benefits of *iLite* technology

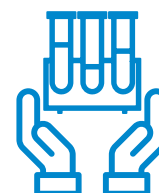

ASSAY READY CELL SERVICE

Get the convenience of ready-to-use cells, and low variability, without the traditional problems associated with culturing the cells yourself!

Based on our long experience and knowhow of developing assay ready cells, Svar cell-based services offer development of ready-to-use cells from sponsor-provided cell lines or cells from other cell line providers.

Assay ready cells to the rescue

- Assay ready cells can dramatically lower batch-to-batch variability as the cells are more uniform
- All cells are stored as frozen uniform aliquots and can be thawed and used in an assay without pre-culturing
- The time from thawing cells to plating the assay is much shorter than with traditional methods. This means your experiments can be performed whenever you need to

Send us your cells -
we will make them
Assay Ready

MASTER CELL BANK DEVELOPMENT

Get your own proprietary master cell bank and benefit from a new level of traceability and sustainability.

We create a master cell bank from one of our off-the-shelf *iLite*[®] cell lines exclusively for you. This assures a steady supply of cells with identical properties through the entire lifespan of the project.

Security and peace of mind

- Your master cell bank is developed in a tiered approach to control origin and passage numbers of each batch
- The cell bank is securely stored in -150°C freezers at two access-controlled locations in our facilities
- Ready-to-use cells with identical properties are supplied from the master cell bank through the entire lifespan of your project with clear traceability back to the original cells

Your proprietary
Master Cell Bank - built
for sustainability

ILITE CUSTOM CELL LINE DEVELOPMENT

Can't find the target you are looking for? Get a custom cell-based solution developed specifically for your drug development project.

We can create a custom cell line tailored for your specific needs. Delivery in an assay ready format offers great convenience and improved reproducibility, while saving time and labor.

Tailored to your needs

- Benefit from all the features of the *iLite* technology in a custom cell line for your target of choice
- The sensitivity of *iLite* cells is enhanced through up-regulation of key components, such as the receptor and certain signaling pathway proteins
- Our in-house expertise and processes have led to a success rate of 100% - we can create an *iLite* cell line for almost any biopharmaceutical target

Get a custom *iLite*
Cell Line - for your
target of choice
