# Fast, Flexible Check Image Capture and Deposit for **Digital Mailrooms.**

RDC API
A CheckAlt Solution

The popularity of digital mailrooms is rising as more small businesses and individuals work from home or operate their business remotely. Despite experiencing an influx of demand for mail management, digital mailrooms that still rely on costly manual efforts are unequipped and lose out on new revenue opportunities.

Unnecessary, laborious tasks beyond simply opening and scanning mail include keying and endorsing checks by hand, prepping deposit slips, and mailing checks to a customer's bank for deposit. Even if a customer opts to have his or her bank send a remote deposit capture scanner to their digital mailroom provider, the intended simplification actually creates more work for staff and drives prices up.

There is an alternative—one that reduces manual effort and turns check depsit services into a profit center for digital mailrooms. That alternative is CheckAlt's RDC API.

Integrates with Your Web-Based Portal — No Change to Your Existing Processes — Accelerates Funds for Your Customers

How CheckAlt's RDC API Works for Digital Mailrooms

CheckAlt's RDC API is a flexible payment processing solution that plugs into existing systems and enables digital mailrooms to minimize manual processes.

When a customer directs your staff to deposit a check received in the mail, simply use your existing scanning process to image the front and back of the check item.

The image and data are delivered to CheckAlt via our RDC API for fast, flexible processing and deposit to your customer's bank account regardless of where they bank.

- ✓ 99¢ Per Item Processed
- ✓ No Setup Fee
- ✓ No Integration Fee
- ✓ No Monthly Minimums*

1 Connect the API to Your Web Portal

2 Scan Front and Back of Check Item

3 Deliver to CheckAlt for Processing

* For the first 12 months.
