BELRON®

iPhone and Android

Belron®, best known in the UK for its Autoglass® brand, is a vehicle glass replacement and repair specialist with operations in over 30 countries across 5 continents. Belron® began working with Compsoft in early 2011 - having released a first version of its English language iPhone app, Belron® needed a proven, reliable partner to support an ongoing programme of enhancements to the app, including localization for multiple countries and languages.

UK - Autoglass®

Australia - O'Brien®

USA - Safelite®

Canada - Speedy Glass®

Canada - Lebeau Vitres d'autos®

New Zealand - Smith&Smith®

As well as industry leading skills in iPhone development and integration with back-end systems, Belron® chose Compsoft for its ability to develop for multiple platforms, and the first Belron® Android app was released in the summer of 2012. To date Belron® has released 20 localized apps for both iPhone and Android. The apps for each platform are derived from a single core app which, using a Compsoft-developed Content Variation System, can be customised for different business units. This enables apps to be created and maintained with minimal development effort while reflecting the different languages, branding, service offerings and appointment times specifically required by each country.

"Compsoft have been proactive and supportive partners in our iPhone and Android app development and subsequent rollout. They picked up an existing code base, made changes to make it easier for us to deploy and manage the apps as we rolled them out to over 20 countries, and quickly managed a port of the original iPhone app to Android while ensuring the user experience made sense on that platform. They have been great to work with over the past 2 years"

Nick Burton, Head of Group IT at Belron®

The apps provide motorists with quick and easy ways to get damaged vehicle glass repaired or replaced. For example, there is as an easy-to-use diagnostic feature which informs the user whether damage can be repaired or necessitates replacement, as well as the ability to book an appointment based on current or chosen location.Two way communication with Belron®'s backend systems ensures the user sees the correct information, and that Belron® receive all booking details.

Compsoft continues to provide expertise and services in support of Belron®'s ongoing programme of mobile development.
