

# **CrisisGo** Client Story: Hanover Community School Corporation

## **Upgrading Safety Drill Management with Technology**

#### **About The Client**

# Hanover Community School Corporation

Phone: 219-374-3500 Fax: 219-374-4411 www.hanover.k12.in.us

**Customer Since: 2018** 

"The ability to communicate, if we did have a real active shooter in the building, just communicating with the teachers while it's going on, that's a perfect example of what we could do."

#### Michael O'Donnell

Director of Safety and Security Hanover Community School Corporation

### **Using Technology for School Safety**

Hanover Community School Corporation had quality safety protocols and procedures in place, but they didn't have a digital safety platform. To help transition to a more technological approach, Hanover started using CrisisGo's digital safety and crisis response platform to conduct their school safety drills.

### **Managing Safety Drills**

Michael O'Donnell, Director of Safety and Security for Hanover Community School Corporation informed that they have successfully used CrisisGo to manage school safety drills for lockdown, fire, and severe weather events.

According to O'Donnell, his district is required to have a fire drill within the first 10 days of school. With everything going on during the start of school, it can be easy to miss that requirement. O'Donnell acknowledged the value of being able to use CrisisGo to remind each building principal to get the drill done within the proper time-frame.

By utilizing CrisisGo, Hanover Community School Corporation can:

- Utilize an organization-wide alerting system to warn all of their stakeholders of an emergency.
- Maintain safety communication with staff in all their buildings throughout the district under a unified communication channel.
- Schedule, perform, and review their school safety drills.

#### **Growing With Their Safety Platform**

O'Donnell informed that Hanover plans to continue to use and explore the safety features of the CrisisGo platform.

He indicated that he would like to start incorporating the Roster Event tool to streamline student accountability during an emergency and obtain more in-depth safety data. O'Donnell stated, "In the long run, I think it's going to help us out."
