

Accounting for Employees During a Crisis: How CrisisGo Streamlines Workplace Safety

The Challenge

As in many manufacturing firms, employees are not able to have personal devices on the factory floor, which created a challenge in communicating with and accounting for employees in the event of an emergency. Crisis leaders needed a more efficient way to know who was in the building and where they were.

When an emergency occurs, employees must report to one of 20 mustering stations based on their location in the building. The organization needed a reliable way to account for every employee at each muster station and communicate critical safety information and next steps.

The Solution

With CrisisGo, managers and the organization are able to track which employees are in the building. Scanning their employee badge activates them in the CrisisGo roster, so in an emergency, the team immediately knows who to look for.

In the event of an evacuation, when employees report to a designated muster point, CrisisGo enables them to check in quickly and easily. This makes it easy for the organization to respond to emergencies by showing in real-time who has been accounted for.

The emergency response team can then use emergency alerting and communication to coordinate their response.

The Results

By integrating CrisisGo with their employee login system, this enterprise manufacturing organization strengthened their ability to account for and connect with their employees in the event of a crisis.

Because only employees who have scanned in to work with their ID badge will display on the emergency employee roster, the crisis response team can quickly and efficiently account for employees without wasting valuable time accounting for the wrong people.

Safety supervisors can quickly check employees in to their muster stations by quickly scanning barcodes or chips on employee ID badges. Employees are marked safe without duplications or mistakes.

CrisisGo's digital safety and emergency communication platform has enabled the enterprise manufacturing organization to maintain workplace safety by accounting for employees and mustering stations, seamlessly communicating between locations, follow response protocols, and share information during a crisis—thus ensuring the safety of their employees.

Customer Profile

Industry: Manufacturing
Location: 180 locations worldwide
Total Employees: 30,000+

Summary

CrisisGo's digital safety and emergency communication platform helps this manufacturing company to quickly and effectively account for all their employees with real-time status checks and coordinated safety communication. CrisisGo also provides the incident command abilities needed for the organization to complete the full workflow of a complicated crisis, like a chemical release or leak.
