

Streamlining New School Safety Routines with Safety iPass

The Challenge

School districts across the country, varying in shapes and sizes, have struggled with the challenge of providing safe learning environments as they return to in-person learning.

Like other schools across the country, Long Branch Public Schools needed a reliable and efficient system to manage the morning pre-screening and building entry routine for students and staff. The district decided to utilize its digital school safety platform, CrisisGo, to address COVID-19 school safety needs.

The Solution

Long Branch Public Schools already had extensive experience working with CrisisGo for school safety. The district has been using CrisisGo as a digital communication platform for school safety for years, and Long Branch decided to utilize CrisisGo's Safety iPass to manage their pre-screening needs for COVID-19 safety.

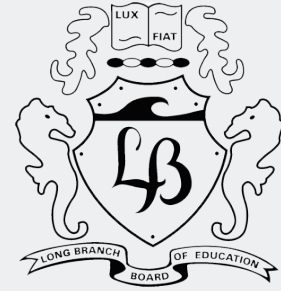

By utilizing CrisisGo's Safety iPass, Long Branch Public Schools was able to:

- Send daily COVID-19 pre-screening and temperature check emails
- Digitally pre-screen and immediately update the entry status of staff & students
- Monitor COVID-19 safety data from an online dashboard
- Maintain COVID-19 related safety information with staff and school community
- Utilize a single digital platform for school safety, including COVID-19 safety measures

The Results

Dr. Michael Salvatore, Superintendent for Long Branch Public Schools, informed that the district would be using CrisisGo's Safety iPass to send daily COVID-19 pre-screening emails to staff members and students' parents. Salvatore explained, "They will send an email to every single staff morning every single morning and an email to every family for every child. You simply click on the email, and there is a report button. I did it this morning, and it was so simple. I went through, and I checked off if I had any symptoms. I entered my temperature and then submitted it. It instantly let me know whether I was able to go to school or not. So if my temperature were too high, I certainly wouldn't be able to go to school."

According to Salvatore, using Safety iPass for pre-screening before entering school or busses helps keep all students, staff, and bus personnel safe. He added, "It's like an easy-pass when you come to school." Safety iPass not only offers the district easy access for secure and reliable pre-screening of COVID-19 symptoms and temperature checks, but the information is also easily accessible for district safety leaders to monitor from an online dashboard. The safety data can also be shared with local health officials for community safety as well.

Customer Profile
