

Enfo has 20 years experience from helping our customers get the right information to the right place, at the right time, at the right cost.

This knowledge and best practice is leveraged to provide a quick start for a full-fledged integration capability in place for our customers.

We will set up your integration capability, in the cloud, as a hybrid or on premise, at a fixed price within a set timeframe.

Baseline Startkit

Cloud Pak for Integration

IBM Cloud Pak for Integration is one of the most complete packages of integration capabilities on the market. It is ideal to solve your integration challenges. It can be deployed anywhere, on your premises or in any cloud. It gives you a common look and feel for all integration capabilities and is fully adopted to modern ways of working. All this combined will give you a best in class integration environment including efficient operation, a great developer experience and a low total cost of ownership.

IBM Cloud Pak for Integration

IBM Cloud Pak for Integration includes all integration capabilities you need in order to fulfill your demands:

- API Life Cycle Management
- Application and Data Integration
- Enterprise Messaging
- Event Streaming
- High Speed Data Transfer
- Secure Gateway

This is put together in one look and feel with additional functions for logging, tracing and asset repository. It is installed on top of Red Hat OpenShift which is a modern container platform.

The license model will let you mix and choose which capability you want to use for your setup.

Baseline Startkit for Cloud Pak for Integration

The startkit consists of several modules, adjusted for your needs with the possibility to choose which ones you need.

Installation

We will install and configure your Cloud Pak for Integration platform which also includes the setup of Red Hat OpenShift. It will be designed and configured to meet your needs in the cloud, hybrid or on premise based on your need.

Training

To better understand the capabilities and features of your new Cloud Pak for Integration environment, we will train you in the following areas:

- Red Hat OpenShift introduction
- Cloud Pak for Integration basics
- Optionally train you in the different integration capabilities

Proof of Concept Project

Together with you, we build and deploy a simple integration solution integrating your applications with your data. We will use Baseline to document both requirements and the implementation, and you will get hands-on experience using all the tools available to you.

Best practices

Enfo has a portfolio of best practices for integration. With this module you will get insights in those and adopt to your mix of capabilities.

Next Steps workshop

Now that the integration capability is up and running, and your staff is trained and ready, we want to make sure that you get the most out of your investment in time and money. We spend a day together with you and your staff to pinpoint what activities you should focus on to make sure that you maintain the momentum you've created with the Baseline Start-kit. We put together a roadmap with activities and a rough timeline.

Benefits

- **Fixed price** of the startkit which gives you control of your costs.
- **Short implementation lead time** through pre-package material that has been used before.
- **Quick start** of your project through a pilot adopted to your needs.
- **Smart usage of competence** with a combination of specialists from Enfo and knowledge from your own organization
- **Increased knowledge** through training and practice

Additional Integration services from Enfo

Enfo offers support and competence for Integration solutions both during development and runtime phases. They can be packaged in order to support you in the best way. Below are a set of services that can be used separately or in combination.

- **Customized educations** through our Integration Academy. It includes overview and detailed sessions as well as practical exercises.
- **Workshops** that help you explore possibilities with Event Streaming and analyze your business needs and possible use cases.
- **Development teams** that offer all needed roles and competencies for a successful implementation of your project.
- Full service within Enfo **Integration as a Service** concept including all that is needed for Development and Operation. This will make it possible for you to focus on your business needs.
- **Operation, Support and Management** services that help you with your daily tasks of your own Kafka streaming platform.
