

The Intelligent Managed Workspace

As leaders around Australia start planning to bring their workforce either fully or partially back to work, and as our venues start to open, the question of workplace safety and duty of care is raised. How do we provide a safe passage back to the office or into our venues for our employees and customers and in what form and capacity should that take to provide utmost safety?

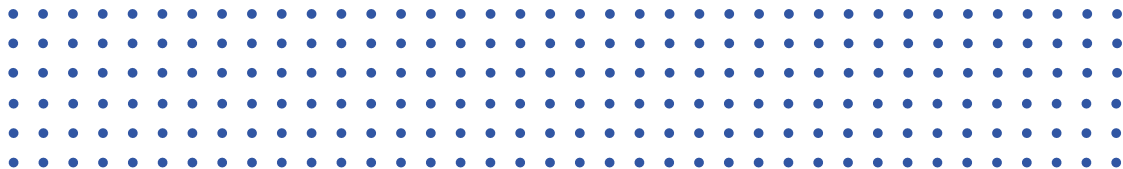

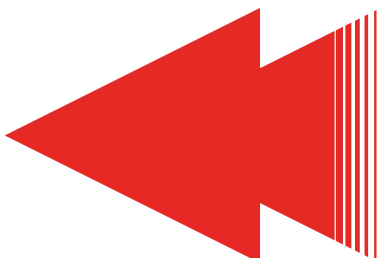

For many, it will be a contingent of the workforce on-site, or it could be an opt-in model or different teams taking a day of the week to work in person at your facility.

Whatever the permutation of this arrangement, you will need to manage it carefully with a digitally enabled managed workspace that can provide a means of tracking compliance and safety reporting.

TDL recommend some or all the below features of a digitally enabled OH&S workplace:

- Self-service reception check-in / check-out procedures with health / temperature checks on arrival
- Strategy and process for social distancing desk set up and booking resources
- Cameras and sensors to track movement in specific areas
- WiFi analytics tracking to demonstrate who is in the office, how long they can stay and monitoring dwell times and density in office space leveraging your existing compatible WiFi deployment

TDL's solution presents live analytics in a simple to use, web-based reporting dashboard, using your floor maps, with real time alerting capabilities.

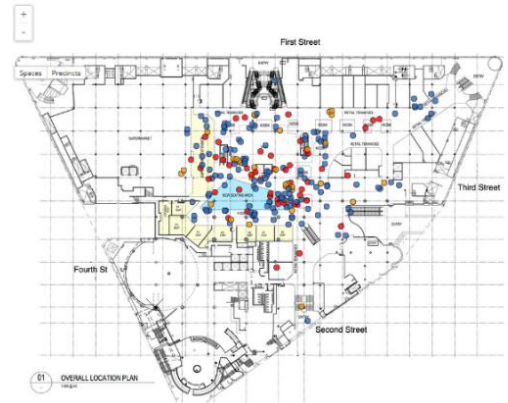

The TDL Intelligent Managed Workspace Solution

Leveraging your existing compatible WiFi deployment, TDL's solution presents live analytics in a simple to use, web-based reporting dashboard, using your floormaps, with real time alerting capabilities.

The Intelligent Managed Workspace solution can be optionally enhanced with additional WiFi Access Points (for greater accuracy and resolution) and Meraki MV Intelligent Cameras.

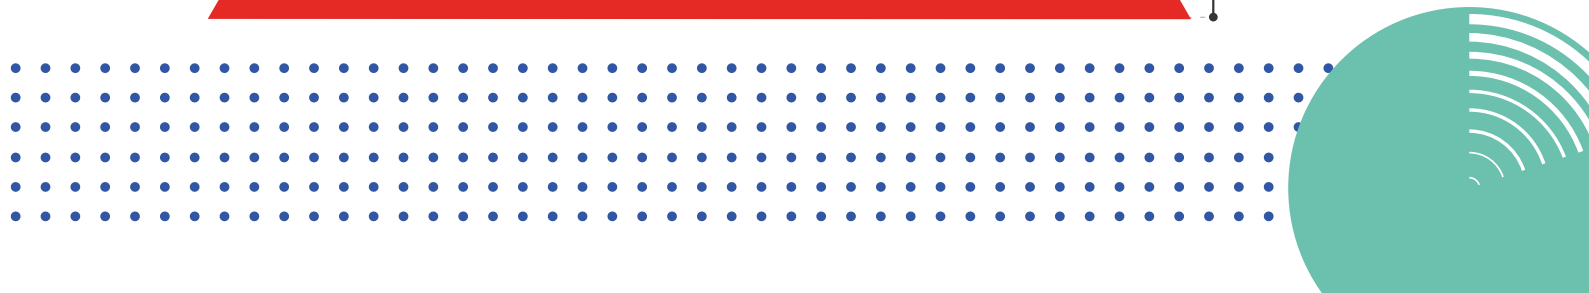

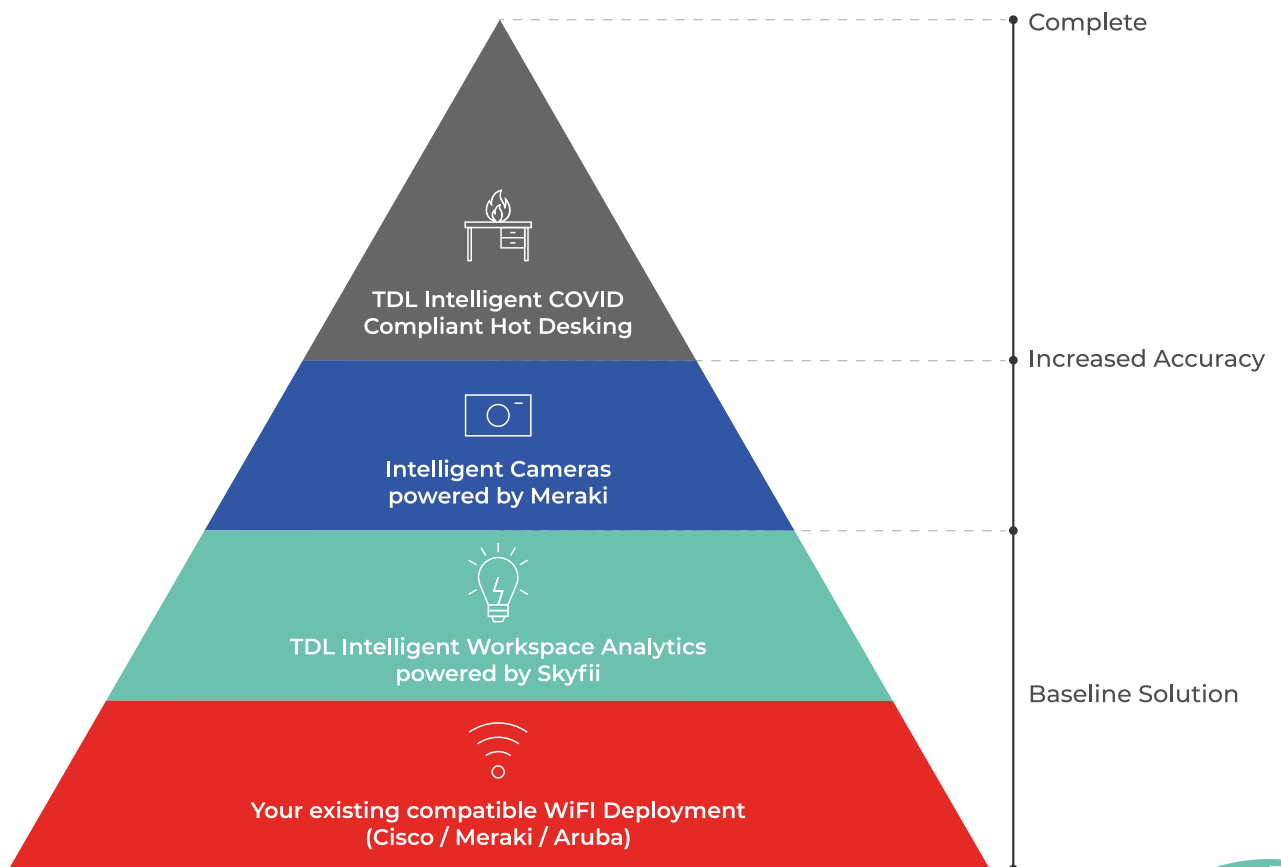

The solution enables managers to:

- Manage real-time occupancy and social distancing in your buildings and venues
- Track and verify COVID-19 compliance
- Optimise staffing and cleaning procedures
- Keep staff & visitors informed of COVID-19 initiatives
- Monitor occupancy by building, floor and zone
- Facilitate contact tracing in the event of an outbreak

How it works:

The TDL Intelligent Managed Workspace platform stack includes:

The solution works with your existing compatible **WiFi** deployment. Users do not have to actively connect to your WiFi for this to work. Accuracy can be increased by deploying more WiFi access points.

Intelligent Cameras and Sensors can be added to increase accuracy levels to 98%+.

Skyfii analytics brings it all together in an easy to digest, easy to consume and reportable format. The Skyfii system can also trigger SMS alerts, or emails to the facilities manager or office manager/HR in real time, as well as integrate via APIs to other systems such as digital signage or even chatbots.

For a complete solution – TDL offers an intelligent COVID Compliant hot desking option.

Benefits

Set and track office occupancy levels thresholds and social distancing rules

Automated counting helping to accurately manage the flow of staff and visitors into your buildings and venues

Proactively manage congestion as staff and customers return to your site

Prevent overcrowding by automatically alerting staff when congestion is detected, or occupancy counts cross a threshold.

Provide assurance to employees of a safe workspace environment

Improve the effectiveness and responsiveness of your return to work safety measures and give employees confidence that you are actively maintaining a safe environment.

Reporting and trend data to inform policy and governance

Get real time reporting and trend data to help you plan and roster staffing levels in your building as well as frequency of cleaning required.

Provide real time visibility

Track crowd numbers, dwell times and congestion for particular areas that can help you reconfigure your venue or office space to maintain special distancing. Density mapping helps to visualise where the hot spots are.

API ready

Connect to a range of other systems and devices to extend the insights and alerts available to your Intelligent Managed Workspace including chat bots, meeting room systems, digital signage and other smart devices such as desk sensors.
