Only at Cryoport

Chain of Compliance®

Full traceability of the equipment and processes used in managing the environmental control of your commodity is provided, including equipment performance, commodity history, equipment requalification, calibration history and correlation of in-field events. Cryoport's Chain of Compliance® meets the newly released ISO 21973 standard General Requirements for Transportation of Cells for Therapeutic Use.

Advanced Therapy Shippers™ (ATS)

The first line of shippers dedicated exclusively to cell and gene supply chain management for both clinical and commercial therapies, the Cryoport ATS line is certified for Human Use Only and was specifically created to be compliant with current — and ready for future — government regulations.

Veri-Clean™

Cryoport's validated cleaning and disinfection process virtually eliminates the risk of cross-contamination by decontaminating all Cryoport Express® shippers and stainless steel accessories. This proprietary cleaning methodology utilizes a multipurpose reagent effective against bacteria, fungi and viruses — and it's guaranteed to reduce external contaminants by 99.9999%.

CryoShuttle™ Local Pickup and Delivery

More security for your valuable commodities: We're now providing local pickup and delivery with trained, uniformed drivers. This service is also available beyond regular business hours, for rush orders and on holidays.

Solutions for BioServices

Available Now: Cryogene, a Cryoport, Inc. subsidiary, provides biostorage and distribution services.

Coming Soon: Cryoport BioServices, including Storage, Packaging, Labeling, Regulatory & QP Services, Drug Return & Destruction, Kit Production.

When you need confidence your patients' critical therapies are being transported safely in contaminant-free equipment,
