

Multi-Factor Authentication

Multi-Factor Authentication (MFA) offers an added layer of security that implements a two-step verification process for authenticating users accessing their Simplicity VoIP account.

Improves Security

Uses a Time-Based One-Time Password (TOTP)

Enables secure access to protect against fraudulent entry due to compromise credentials

Generated code on user possessed devices

Eases User Management

Available for all users in Client portal

App based technology for iOS and Android devices

Costs

No additional costs

Additional Features

Uses Google Authenticator to generate secure code

App provisioning done through QR codes
