SpeechDirect

SpeechDirect allows for mid-call speech detection. When reaching an Auto Attendant or company directory, callers can speak, rather than select digits from a phone pad routing calls based on key words.

SpeechDirect eliminates the need for callers to press digits to route calls. It also allows users to direct their call from an Auto Attendant by saying key words, departments, and names.

Improves Client Experience

Eliminates need for callers to press digits to route calls

Allows callers to search an Auto Attendant or company directory using audio prompts

Eases User Management

Easy to configure and modify

Key word customization

Costs

\$19.99/Auto Attendant/month
