HIGH-SPEED SOLUTION FOR THE AUTOMOTIVE INDUSTRY
Snop becomes autonomous in anonymising data from non-production SAP systems.

Snop is part of the Financière Snop Dunois (FSD) group, a major player in the automotive industry. The company specialises in cutting, stamping, profiling, assembly and manufacturing press tools for the largest automotive groups including Audi, Volvo, Ford, Renault and Volkswagen. The group operates internationally, with an annual turnover of over €1 billion in 2018.

SNOP'S SAP TEST DATA CHALLENGE

Snop used the Data Sync Manager™ (DSM) suite modules Client Sync™ and Object Sync™ to create test data to refresh their non-production SAP systems (from their 2TB production system).

This real test data, sourced from production systems, was made available to external test teams, allowing internal teams to focus their efforts on the core business. In view of this outsourcing of IT resources, anonymisation was essential for Snop to ensure that personal data was secure, and to comply with GDPR.

Snop wanted to:
- Comply with GDPR
- Make best use of Client Sync and Object Sync modules
- Reduce the risk of leaking non-production SAP data (external consultants, TMA)

DATA SECURE IS KEY TO ANONYMISE DATA

SNOP decided to use Data Secure™ (part of DSM) to anonymise their non-production environment, mainly the development and sandbox systems.

Examples of this anonymised data include:
- Personal, identifiable information (emails, names, HR personnel numbers, telephone numbers, addresses)
- Bank information (account number, IBAN data, SEPA, bank name)
- Suppliers, business partners and customers (emails, names, telephone numbers, addresses)

FAST IMPLEMENTATION AND SECURE DATA

After a successful implementation in five days, the internal Snop teams are completely autonomous in anonymising data from non-production SAP® systems. Data Secure allows all technical and functional teams to work with secure data, while ensuring data integrity. As a consequence, the Snop teams have improved their productivity in deploying SAP.

Flexible configuration
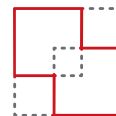

80+ Anonymisation functions

Fast implementation

Team autonomy in customising anonymisation rules

(many transformation functions, eg. random name, value deletion, ABAP...)

Full integration with Client Sync and Object Sync

"The implementation of Data Secure was the most motivating phase. Data Secure anonymised our SAP test data quickly (2TB of data in six hours in the sandbox system). The anonymisation rules are simple to change and we are independent in changing these rules (no need for an EPI-USE Labs consultant to be involved). We use scrambling-type rules for IBAN data, allowing complete data integrity."

Gianluca Baldi, Head of Functional Division, Snop

ABOUT EPI-USE LABS

Our passion at EPI-USE Labs is to innovate and deliver: our solutions and consultants will enhance any SAP landscape and project. To do this,we employ highly skilled individuals whose technical knowhow and experience is capable of making our goal a reality. Over the last thirtyplus years, hundreds of companies across the globe have discovered the difference our solutions make to their day-to-day operations. To find out more about EPI-USE Labs' solutions and services, please visit www.epiuselabs.com or contact us at info@epiuselabs.com

**EPI-USE Labs is a proud member of the groupelephant.com family.
