DATA SYNC MANAGER 5 UPGRADE SERVICE

At EPI-USE Labs, we are constantly striving to provide the best third-party solutions for SAP. To achieve this, we periodically bring out new major releases of our software.

We are delighted to invite you to upgrade to Data Sync Manager™ 5 (DSM5), which takes the existing functionality and capabilities of the Data Sync Manager software suite to the next level.

BENEFITS OF DSM5 AT A GLANCE:

- **Masking on exit**
  With DSM5, data is masked in memory before it leaves the source system. No files containing sensitive data; no network transfer of data unmasked.

- **Cross-system copying and masking**
  Integrated copying and masking of data across multiple systems, such as S/4HANA, CRM and BW.

- **Cross-system monitoring**
  Monitor multiple Client Syncs from one system, even Solution Manager.

- **Centralized control**
  Define systems, clients, transfer routes etc. in one system and distribute. Solution Manager can also be the controller.

- **Automation ready**
  DSM5 can be integrated with orchestration and test automation technologies via APIs.

- **SuccessFactors enabled**
  Object Sync and Data Secure can now copy and/or mask SuccessFactors data simultaneously (additional license required).

- **Better user experience**
  Dedicated launchpads to streamline user experience, more notification capabilities, better support technology, template capability across all engines.

- **Authorizations and control**
  Enhanced User Group and User assignment to Routes, Artifacts etc. Nine different/USE authorization objects for granular access control.

- **S/4HANA support**
  Support for all on-premise S/4HANA releases. Future releases supported within six months of availability.

DON'T JUST TECHNICALLY UPGRADE YOUR DSM SOLUTION.
USE OUR UPGRADE SERVICE PACKAGE TO:

Review existing usage and receive consultant recommendations on best practice

DSM covers a lot of areas, and has immense flexibility and power. Users iterate and adapt their templates and processes. With our upgrade package, you can clean up, bring just the best parts and improve processes. You can also gain insight into how other organizations harness the power of DSM.

Migrate administration settings from DSM4 to DSM5

Our consultant will recreate the parts that should come over, and review the settings at the same time, with recommendations for improvement in areas like User Group assignments and control of data flow.

Run comparison syncs with Client Sync, and validate differences between the two runs

See the differences, and sign off before moving from DSM4 to DSM5, to ensure users receive continuity of service.

Uninstall DSM4 across the landscape

The EPI-USE Labs consultant will provide removal steps for the previous code base and recommendations for authorization clean-up for redundant access.

Migrate masking rules from Object Sync and/or Data Secure 2 to Data Secure 3, and then enhance them with all the great functionality in Data Secure 3

DSM5 has much more capability to secure and protect data, and control its flow around the landscapes. Take advantage of the delivered content, and receive expert guidance from consultants that have done this before.

Adapt and improve the masking Policies and assign them across the landscape

Policies can enforce data protection decisions and be used to satisfy auditors that the data is being managed in compliance with legislation. This is Data Security by Design.

Review, improve and migrate Object Sync templates

Review, adapt and discard templates to ensure the best ones are coming to the new version.

DSM READINESS ASSESSMENT (DSMr)

Leverage the latest DSMr as the first step to DSM5

The DSMr provides an interactive report on your SAP systems, accessible via Client Central, and also includes specific tiles advising on DSM4 configuration and content. This enables EPI-USE Labs consultants to map out the upgrade package required.

UPGRADE TO DSM5 TODAY

With DSM5 you can

- Reassure your auditor that personal data is masked on exit, and done so based on the agreed policy.
  No matter how test data is copied back with DSM, the policy rules will be applied, even when using Client Sync.
- Bring consistent test data on demand back between ERP, CRM and SRM.

With our upgrade service you can

Get the very best of DSM5, with no disruption to the service you're providing to your business.

Contact your Account Manager for availability and pricing in your region.
