

Exam Integrity and Authentication Streamlined to Make Exam Day More Secure

Protecting the integrity of your assessments is paramount. ExamID is the exam integrity and student authentication software that can help prevent exam-taker impersonation and create a secure and streamlined check-in process. With multiple identification methods, ExamID can help your institution set up and deliver secure exams — anywhere at any time.

Detect attempted impersonation and provide documented evidence of exam-taker impersonation to faculty and administration.

Deliver remote or large-scale assessments without the cost of manual ID verification or sacrificing exam integrity.

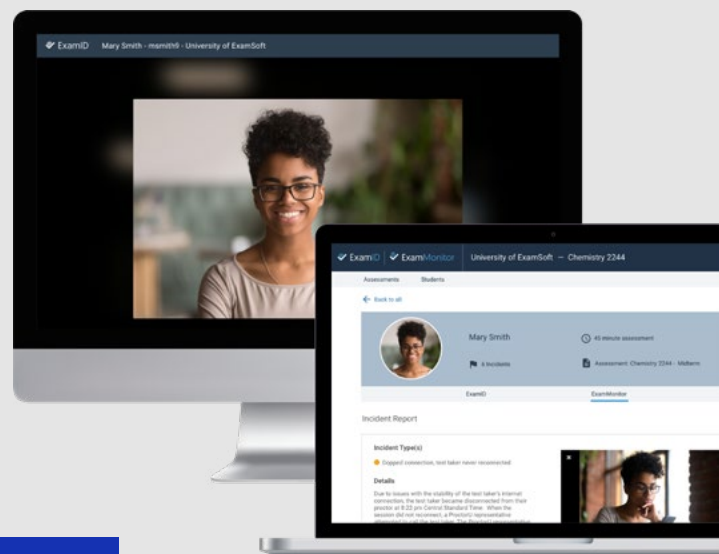

Allow students to complete remote assessments without having to coordinate with a faculty member who can personally verify their identity.

Two-Step Authentication

ExamID uses a two-step authentication process — username/password and facial identification analysis — minimizing the opportunity for exam-taker impersonation.

Streamline Large-Scale Exams

ExamID removes the process of student check-in traditionally required to verify student identification for large-scale exams, while simultaneously reducing the possibility for human error.

How It Works:

1. Exam-takers establish a “baseline” of authentication the first time they log into their exam software.
2. For each subsequent assessment, exam-takers will be verified against their username/password and facial identification analysis via their device’s webcam.
3. Exam-takers who do not pass identification verification will still be able to proceed with their assessments; however, failed authentications are flagged in the system. Exam administrators will later review ExamID files for verification.
4. An additional layer of security can be included through ExamMonitor, which provides proctoring services via webcam throughout the assessment.

ExamID + ExamMonitor = End-to-End Remote Exam Security

ExamMonitor is the A.I.-driven remote proctoring solution that continuously observes exam-takers with video and audio throughout the exam, enabling an alternative to in-person proctoring and providing confidence in the integrity of all your exams.

Exam Control

Flag assessments for ID verification

Access

All students can begin exams even if there is an anomaly in the ID process

Accountability

Review failed authentications and make determinations on academic dishonesty

Accommodation

Disable ID verification for individual students

ExamSoft is the digital assessment platform that helps institutions achieve higher levels of course, program, and student success. With an intuitive testing application, ExamSoft makes it simple to create, administer, and grade exams, and generate detailed performance reports from the results — all to provide educators with a complete and accurate view of student learning.
