

SOLUTION BRIEF

HYAS™ AND POLARITY

HYAS Insight and Polarity combine to speed up investigations and locate adversaries

POLARITY

The Polarity-HYAS integration enables fraud, threat, and IR teams to quickly triage threat actors and get to the bottom of an investigation quickly by enabling them with data awareness and recall. The integration effectively provides "HYAS Insight anywhere" and allows analysts to immediately understand where threat actors are located and access the WHOIS information around the domains. With these capabilities, teams can triage information immediately and remediate threats faster than ever.

TECHNOLOGY OVERVIEWS

HYAS Insight

HYAS Insight is a powerful threat investigation and attribution solution that improves visibility and productivity for analysts, researchers and investigators while vastly increasing the accuracy of their findings. HYAS Insight leverages exclusive data sources and non-traditional collection mechanisms. It lets you connect specific attack instances and campaigns to billions of historical and current indicators of compromise faster than ever before, bringing invaluable new insights and visibility to your security efforts. With an easy-to-use user interface, integrations, and API access, HYAS Insight combines rich threat data into a powerful research and attribution solution.

Polarity

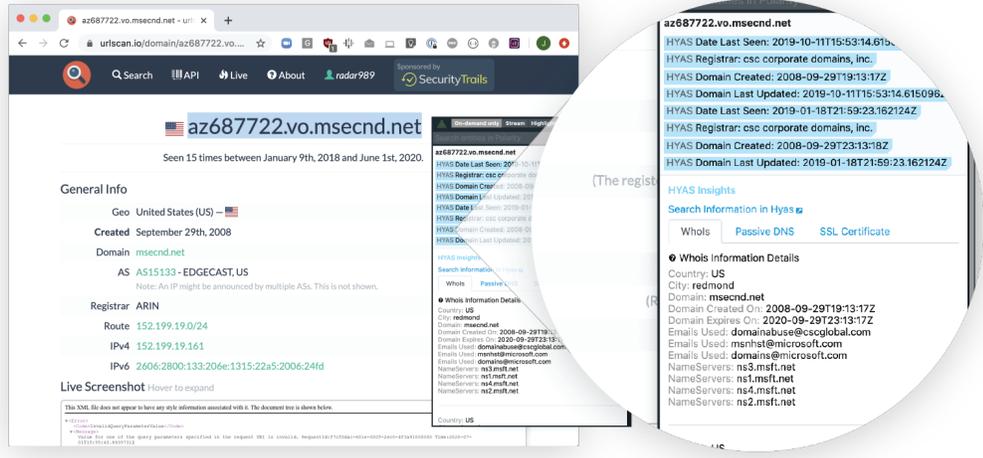

Polarity uses computer vision (i.e. software-based Augmented Reality) to recognize what's on a screen in real time as a user is doing their work. When Polarity sees data that has been annotated by the user, a teammate, or has information available through integrations to other products, it automatically overlays the information on screen, in real time, regardless of the application they are using. Polarity helps in two ways: users make better decisions because they have the contextual information needed to be informed, and they make faster decisions because they don't have to interrupt their workflow - the context needed is simply there exactly when it is needed.

Integration Use Cases

- ▶ Fraud detection
- ▶ Forensics and incident response
- ▶ Threat intelligence
- ▶ Threat hunting

Integration Highlights

- ▶ Search the location of an IP as well as the passive DNS
- ▶ Investigate the WHOIS, passive DNS and SSL information for domains
- ▶ Identify the domain WHOIS information related to an email address

ABOUT POLARITY

Polarity improves decision-making by allowing users to capture, recall, and share intelligence across any workflow. Polarity is software-based Augmented Reality for your data. You don't need glasses or goggles to get the contextual information needed to make decisions, exactly when you need it. Polarity brings together what you know, your teammates know, and what's known by all the tools you use in the SOC, so you can see the full story in the data. In addition to bolstering collective memory, the Polarity user community has built over 100 integrations. Polarity's customers include Fortune 10/100/500 enterprises and the U.S. federal government. ABOUT HYAS

HYAS enables enterprises to detect and mitigate cyber risks before attacks happen and identify the adversaries behind them. HYAS Insight is a threat intelligence and attribution platform that improves visibility and productivity for analysts, researchers and investigators while vastly increasing the accuracy of their findings. HYAS Insight enables analysts to connect specific attack instances and campaigns to billions of historical and real-time indicators of compromise faster than ever before, bringing invaluable new intelligence and visibility to security efforts.

Threat and fraud response teams use HYAS Insight to hunt, find, and identify adversaries, often down to their physical doorsteps.

Learn more about how we can optimize your threat investigations with the HYAS Insight at <https://www.hyas.com>.
