

Specifications

FM Antenna - Car Mount

This easy-to-use, car-top mountable antenna, gives you the flexibility to use your own cable and eliminate the stand. Using a suction-cup mount places the antenna close to the cars receiving the signal (instead of on the transmitter) allowing you to move it out into the parking lot where it is needed most.

The RF Venue FM Car Mount Antenna features very low SWR over the entire FM band for maximum efficiency and uses the vehicle itself as a ground plane that preserves bandwidth. The antenna is rated for up to 100W continuous operation and is weather resistant but not for permanent outdoor installations.

Electrical

Radiation patternomnidirectional
Polarization vertical
Impedance 50-75 Ohms
Frequency Range 88-108 MHz
Typical VSWR..... 1.5:1
Typical Return Loss..... -17dB
Max input power 100W

Physical

Dimensions (aprox. max) 10x100x8cm
RF input connector..... BNC female
Weight 2 lbs
