- +15.000 supply chain partners
- +92 countries

## OSCA QC: More transparency in quality management with Setlog

Designing quality management processes quickly and efficiently requires complete transparency of all test and inspection results as well as the ability to actively intervene at any time. These advantages are what Setlog's QC solution offers. With OSCA QC, you can connect all your partners directly to your test and inspection processes online, actively check the quality of your products, and securely record and manage results.

Here you can find an overview of all modules and functions of OSCA QC:

#### Quality Test

Order tests, connect to your laboratories, and record test results uniformly in the system. Based on the test results, you can release goods or order follow-up processes such as post-processing or further tests.

#### Quality Inspection

Control your product testing with a system-supported coordination process and central document management. Schedule inspections and integrate QC partners directly into the release process.

#### Test Admin

Manage test packages and parameters independently, and thus maintain a pool of test criteria that can be easily accessed when tests are commissioned.

## YOUR BENEFITS USING OSCA QC

Shortened lead times through early planning and monitoring of relevant inspections

Faster identification of quality problems and reduction of quality risks

Transparent preparation of information and documents for all parties involved

## SETLOG'S SOFTWARE SOLUTIONS

Setlog enables you to optimize your entire inbound supply chain with the cloud-based software solutions OSCA SRM, OSCA CSR, OSCA Procurement, OSCA Global Logistics and OSCA QC.
