

Digital dining without limits

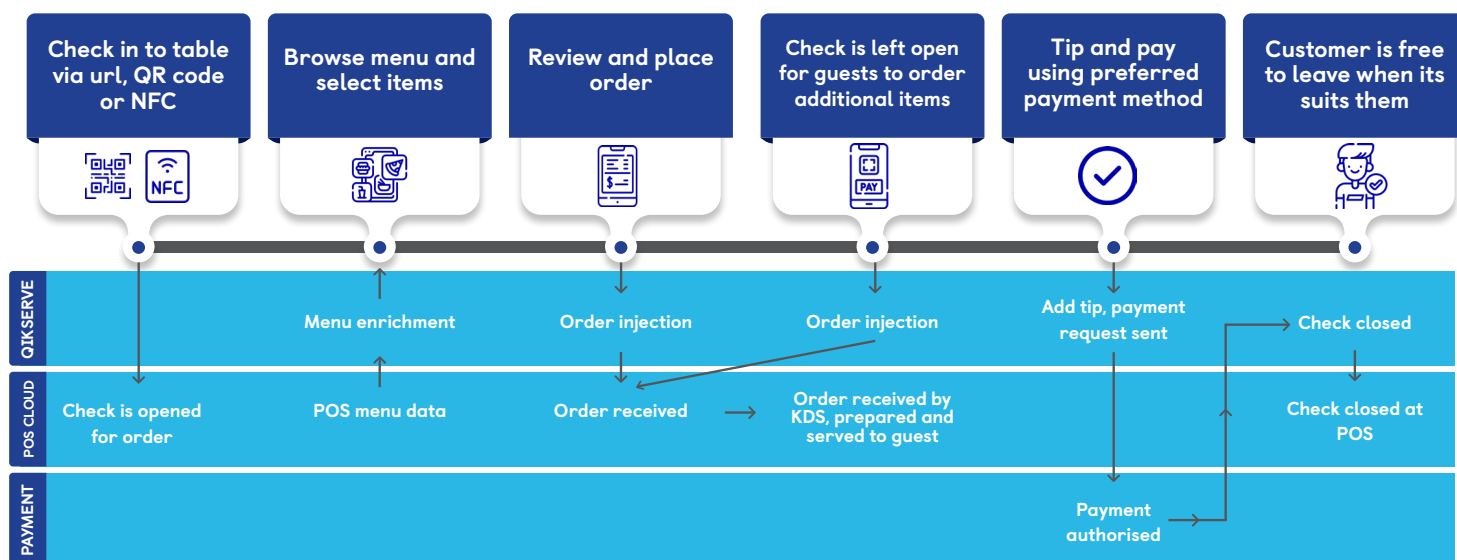

Bridging the gap between traditional and digital ordering, QikOrder's Open Tab journey introduces tradigital on-premise dining. Now, guests can digitally order food and drink to their table or seat without the need to pay immediately.

Greater spend per head

With the barrier of paying in rounds removed, guests can relax, adding extra items to the bill throughout their experience.

Streamlining operations, and reflecting the tradigital approach, servers can add items to the guest's tab from their point-of-sale.

More payment methods
coming soon

QikOrder Open Tab

Scans a QR code, enters a URL or taps an NFC tag to access the menu

Places their order; their food/drink is delivered when ready

Has the option to place further orders, adding each to a digital tab

Uses the portal to pay once they are ready or their experience is complete
