Customer Case Study

Public Sector – SaaS Data Privacy

- One central place to organize files, calendars and emails
- Access from all interfaces and devices.

Customer

Public Sector Organization

Project

Data pseudonymization of e-mails and calendars

- 20% Higher adoption of usage of email & collaboration tools
- 50% Reduction of IT resource spending

Our employees are satisfied using the framework of O365 with the full functionality suite. Without Eperi, we were not allowed to use O365 as we are a public sector organization. eperi supports our governance strategy by encrypting confidential data before moving it to the cloud.

66

Problem

The customer providing **public sector** occupational pensions with **5,400 participating employers** and about 4.3 million insured employees. The public organization is adopting **Microsoft Office 365** in the cloud. However, cloud storage for **e-mail and calendar** data is deemed unsecure in the public sector and therefore not allowed.

Solution

eperi Cloud Data Protection Gateway is installed at a **governmental cloud provider** service for the local government office. It ensures **sensitive e-mail and calendar** entries are not stored in the Microsoft Office 365 Cloud in plain text.

In any case, business users are still able to use the **relevant business functionalities** like searching and sorting and the eperi Gateway – as the only solution worldwide – supports **all Microsoft interfaces on all devices** (MAPI, Active Sync, EWS, OWA etc.)
