Case Study

# Customer Case Study

## Finance- Controlled Administrator Access

- Protection of research results from fund assets
- Seamless access for funds managers

- 100% Pseudonymization of restricted company data for assets

” With the eperi Gateway, our fund managers are able to protect our most powerful company assets: our customer data and the internal analysis of our funds companies. “

### Customer

International Funds Management

### Problem

Our client, an international fund management firm with total assets of €276 million, manages funds for institutional clients globally. Fund managers worldwide **collect sensitive company data as their most valuable asset**. For protection of the data in the cloud, an **encryption service** is necessary to **prevent hackers and administrators** accessing the data content.

### Solution

As the unique solution for **protecting data**, the eperi Gateway has been installed in the customer’s data center to **encrypt data easily during transit, in use and at rest**. Even administrators can only **access encrypted data**. No need to worry if there is a **data breach**.

### Project

Encryption of sensitive fund-related company data
