Tests show that for each day oil is not filtered, its usable life is reduced by 2 to 3 days. The example above shows the daily degradation of frying oil. The top row was filtered daily without Broaster XL Filtering Compound. The bottom row was filtered daily with Broaster XL Filtering Compound.

As shortening breaks down during frying, dissolved impurities soak into food affecting its taste, texture, and appearance. Broaster® XL Filtering Compound clarifies shortening by filtering out food debris. But XL does more than simple filtration. Each XL particle acts like a tiny magnet to attract and remove dissolved tastes and odors that spoil fried food. With Broaster® XL Filtering Compound, your oil stays fresh, clear, and sparkling clean so you serve foods that look appetizing, fry crisp and golden, and taste delicious while saving money as a result of extended oil life. Can you afford not to filter with Broaster XL Filtering Compound?
