

# GREEN RECOVERY WEBINAR SERIES

With the UK now emerging from lock down it is time to start planning for the future. Talk is turning to planning for an economic recovery and a green recovery, but very few can explain how to deliver it.

This webinar series will bring together key players in the energy transition to explore how, as a sector, we can deliver a more equitable and sustainable future.

In response to the significant economic upheaval caused by the COVID-19 pandemic, the Government has recognised the need to **stimulate economic growth** in a **sustainable** and **resilient way**.

Regen's own analysis shows that there is a huge 61 GW pipeline of green electricity projects, many of which are 'shovel-ready', which could provide **200,000 jobs**.

This series of five webinars will explore what practical steps we can take as a sector to create the jobs and investment to drive the UK's green recovery and deliver quick returns for the economy, people and communities. As well as highlight what we need from government and regulators to enable this transition to occur quickly.

## SPONSORSHIP

Position your company as a leader in the green recovery

Options start from **£1,500+VAT per webinar** or **£5,500 + VAT for the series**.

Bringing together leading innovators, investors and policy makers to debate how we turn net zero policy commitments into the scale and urgency of action needed to lead the green recovery.

Regen has a proven track record in leading engaging digital events and our webinars regularly attract over 500 people from across the sector.
