

Optimized Packaging Operations

It all begins with the right code...

Accurate | Smart | Optimized
processes across the factory

Printing and coding for Industry 4.0

Systech integrated packaging solutions—your single source to minimize waste, drive efficiency and achieve compliance.

Running multiple packaging lines 24/7 demands relentless work to avoid downtime and issues. Using different equipment and software at various stages of packaging operations increases the risks of data being inconsistent and systems not communicating effectively.

There's a simpler solution. The Systech Packaging Intelligence Suite™ optimizes your packaging processes from message design and coding through pallet labeling. We ensure all your systems work together to produce the highest quality packaging at the lowest cost.

Data-driven insights expand what's possible

Your packaging operations generate event data that can drive a wealth of process improvement opportunities all the way through the supply chain. Systech captures and stores critical data with minimal effort to give you meaningful intelligence when you need it, how you need it.

From the very start of deployment, we empower you with digital connectivity and real-time and historical insight. Leverage actionable data intelligence for smoother line operations, more strategic decision-making and stronger brand protection in the marketplace.

Packaging Compliance

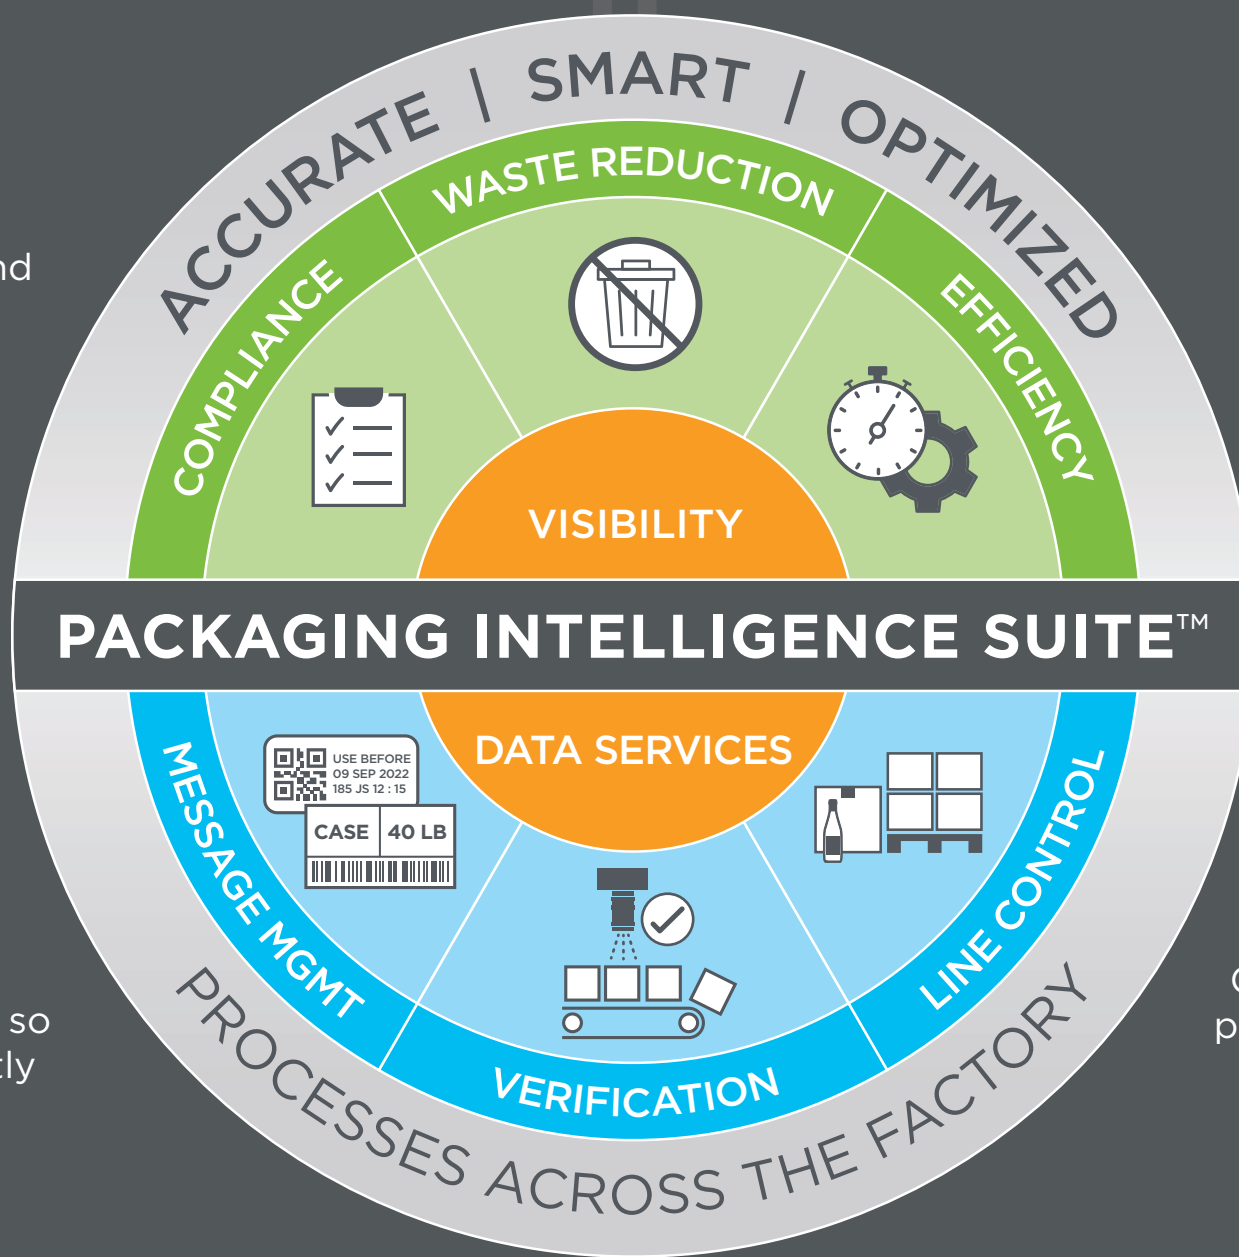

Create messages and code products that meet retailer and trading regulations

Waste Reduction

Eliminate incorrectly coded and packaged products before they are created

Efficiency

Improve operations so they run as efficiently as possible with minimal downtime

Message Management

Manage complex message designs and data for many products accurately and consistently

Verification

Ensure high-quality packaging and readable, accurate codes

Line Control

Optimize coding and printing processes for greater uptime, instant visibility and maximum OEE

Improve performance at every stage, on every line

Systech understands the identification and traceability challenges you face throughout the lifecycle of your products. With more than 17,000 installs under our belts, we've "walked the line" at thousands of manufacturing sites to refine our digital packaging solution and implementation processes.

Whether you need to optimize operations on a single line or conduct major rollouts across multiple global sites, we help you streamline printer setup, simplify and integrate data and label management, and deliver deep insight for maximum OEE.

Cut your
changeover
duration by

50%

and save 100s of
hours per year

Ensure your
finished products
are correctly
marked and

100%

compliant with
regulations

Reduce costs of
manual data entry
and message data
maintenance by up to

90%

On critical lines,
increase production
output by improving
OEE up to

15%

We ensure the right code on the right package to:

**Achieve
Compliance**

**Reduce
Waste**

**Drive
Efficiency**

**Leverage
Insight**

a **DOVER** company

Systech solutions by Markem-Imaje provide packaging coding, product authentication and traceability to combat counterfeiting and diversion, optimize processes and meet compliance. Built on decades of Systech experience as the leader in pharmaceutical serialization and Markem-Imaje's trusted product identification expertise, our comprehensive brand protection and packaging intelligence suites deliver accurate real-time insight, actionable product data and digital connectivity.

Global brands across industries rely on us to keep their products **authentic, safe and connected** across the supply chain—from packaging to the consumer's hands. Together we are optimizing packaging operations and revolutionizing brand protection!
