Suzuki 7in Model 1 LED Headlight Adapter Bike Fit Guide

Step 1:

Measure the inside hole of the bezel. This can be done with a ruler or calipers. Inside hole diameter should not be less than 185 mm (7.28 in). Headlight can stay mounted.

Step 2:

Check to see that the bezel adjustment mount is on the left side when looking from the rear.

Step 3:

Remove the stock headlight and measure the distance between the two mounting feet (grommets) on the bezel. This can be done with a ruler or calipers. This measurement should be around ~182 - 185 mm (7.1 -7.25 in)

Step 4:

Measure the distance from the middle of the mounting holes to the front of the bezel. This can be done with a ruler. This measurement should be around ~45 to 47mm (1.77 – 1.85 in)

Step 5:

With the headlight off, measure how much room you have in the headlight bucket. This can be done with a ruler. Most LED headlights will need 30-50 mm (1-2 in) to properly fit. If your stock setup passes steps 1-5 this adapter will most likely fit your bike. Please email Info@NextLvInnovation.com to let us know. If this is new information to us, we will be happy to discount your order.
