

CuraMedix Connect

Research, news and marketing tips to help you grow your practice.

Greetings!

With summer break behind us, kids and parents are out shopping for everything from crayons, glue sticks, No. 2 pencils, and combination locks to 3-ring binders, college ruled paper, graph paper, a ruler, a protractor, highlighters, Post-Its, index cards, graphing calculators, laptops, and, of course, the sturdy backpack to carry it all.

While high school is in your rearview mirror, you know the importance of being ready to kick off the new year. Not having EPAT, ESWT or EMTT in your "Back-to-School" kit is like walking into Physics or Calculus without your TI-84.

Shock wave and EMTT are clinically proven, regenerative technologies which can help you improve patient outcomes and increase practice revenue—and, the CuraMedix team is here to help you every step of the way.

Ready to add one or both of these clinically proven technologies to your mix? Let's talk!

All the best,
Elise
