

The Cure

As I'm sure you're all aware, Anand Fedele, world renowned piano player, Nobel Prize recipient, and curer of COVID-19 was killed in a tragic piano accident. Thousands of adoring fans tried to save him, but it was too late. Anand is widely known as perhaps the greatest human to have ever lived due to his great achievements, but it's important to remember where he came from. Today, we'll be looking back on how the master pianist saved the world from Coronavirus.

The story starts with a bison named Benson and his human owner, who was of course Anand. Benson was about one year old and didn't know much about where he came from. One day, Anand decided that it was time for Benson to explore the world. So that day he decided to open his laptop and search for a trip to France for two. He booked the trip and started packing. In Benson's bag, Anand packed the bison's little pajamas and black and white suit, and he stuck it in his carry on.

The next day, they went to the airport. The center was crystal clean and polished white. Between the staggered lines and crowded TSA, voices seemed to bounce off the walls. Anand and Benson went to the ticketing counter where he told a lady named Mrs. Cahill their names, ages, and where they were going. He handed the passport to her and she asked him where the second person was. He said with disgust, "Wow, he is right here and doesn't really like you right now" as he pointed to his breast pocket. He stormed out of the airport with Benson and went home with a sense of distaste. He told himself, "Tomorrow I will return, and go to France."

He opened his laptop to reschedule and his screen turned red. It read "Due to a new outbreak, all flights to Europe are canceled. You will get your money back within a week." Benson was devastated, and a single tear dripped from his face.

Suddenly, Benson leaped from the bed and ran as fast as possible, his tiny feet made little skidding noises as they touched the dark amber hardwood floor. From the hallway, he hopped off the top stair, and Anand's hands just missed Benson's body and he fell down. He recovered quickly and continued to follow the little animal. Benson went through a minuscule hole in the wall. Meanwhile, Anand body-slammed a bigger hole in the wall and found a lab. Within the lab were many labeled beakers but the one that caught Anand's eye was labeled "COVID-19 cure." He ran directly towards it, gripped it tightly, looked at Benson, and said "you did this?" Benson chuckled and scoffed with a dumbfounded look on his face. Anand hugged Benson and patted his minute head. All of a sudden he got a jolt of energy, and said, "we need to share this with the world. Why didn't you tell me about this earlier?" he asked Benson.

Benson put his hoof on his forehead and shook his head. "Think about it Benson, if we share this cure you will be able to go home to France!" Benson's little eyebrow rose with intrigue. Anand raced to the open hole on the wall and grabbed the house phone. He called his close friend Henry Symes and said, "We did it, it's my last year and I did it, the world will no longer have to suffer at the hands of corona." Within days, the cure for COVID-19 had been made readily available all over the world. The pandemic died out within days.

Today, Anand is one of the most recognized people in the world. He was awarded the Nobel Prize for Medicine (the close runner up was Benson), every museum has his picture, and every school tells his story. Anand's legacy is carried on by his parents, his sister Isabella 'Bella' Fedele, and by all the members of his middle and high school, the Waring School.
