Exelon Pandemic Response Plan Updated in Management Model

DATE: July 13, 2020

FROM: Dave Rhoades, COO Fleet Operations

INSTRUCTIONS: Please review the following information and communicate with your employees as appropriate.

Exelon has revised HR-AC-961, Infection Control in the Workplace During Epidemics and Pandemics, to incorporate COVID-19 pandemic response learnings, provide expanded infection control guidance, and replace interim guidance documents.

The body of the procedure provides detailed guidance on:

- Pandemic virus control measures, including heightened hygiene practices, social distancing and pandemic personal protective equipment.
- Fitness for work practices and good practices to be used outside of the work environment, such as while commuting or when leaving home, during an epidemic or pandemic.

Interim guidance issued during the early stages of the COVID-19 pandemic has been incorporated, and COVID-19 specific attachments replace the interim guidance, including:

- Extended Use of Surgical, KN95 and N95 Masks
- Care and Use of Face Shields
- Cleaning of PPE for Pandemic Situations
- Non-Exelon Worker Pre-Screening Questionnaire
- COVID-19 Pandemic Personal Protective Equipment (PPE)
- COVID-19 Confirmed and Suspected Case Checklist and Retaining/Returning Asymptomatic Close Contacts

To provide Operating Company specific guidance on PPE, the Nuclear COVID-19 PPE Matrix has been superseded by the guidance added to SA-AA-116, Personal Protective Equipment (PPE) in Revision 22.

The procedure is a Corporation-wide document and can be located on the Business Services Company Management Model intranet site. From the Exelon intranet home page Quick Links, select the Management Model icon.

Then enter the procedure number into the Search Controlled Documents field, select BSC toggle button and then Search.

HR-AC-961 and SA-AA-116 provide detailed guidance to ensure continued pandemic safety measures and to position the Corporation for safe and responsible workplace re-entry when pandemic conditions allow.
