

LAW AND ORDER: Integrating email into the information management

WILD WEST

More than
bytes of data **2.5 quintillion**
are now created on a daily basis

**Structured data is
easier to manage**

**But unstructured data,
such as emails, are a drain
on productivity and storage**

More than **124.5 billion work**
emails were sent and received in 2018

...impacting employees' productivity
levels and resulting in communication loops
being left wide open.

Improperly managed, vital information is left
stuck in inboxes, not visible to project teams
and business leaders.

The Mail Manager effect

Mail Manager uses AI to file emails to a centralized
location, and makes every email findable in 3 clicks.

That means reduced business risk, improved
productivity, more informed decision-making and
significant time saved.

Mail Manager saves
around **3 hours**
per person per week

If the average
employee costs
£15 per hour

That equates to a
cost-saving of
£180 per user
per month

For a firm with **50 employees**, that results in
a total saving of **£9.000 per month**

Mail Manager searches

1million EMAILS
in less than **2 sec!**
