

Mail Manager helps organisations spend more time on the fee-earning work that they love doing and less on the things they don't, admin!

Why Mail Manager?

Mail Manager is an email management add-in for Outlook designed to help project and client-based businesses take control of their email. We work with businesses where email management affects their ability to manage claims, project disputes, and the productivity of their staff.

Oftentimes, businesses we work with have been left frustrated with the amount of time their staff have wasted searching for information held in emails, and recognise how important retrieving project information is. We can help you transform the way your business works by addressing the tool your team use every day, Outlook.

Reduce risk

Never lose track of your business' critical correspondence again, reduce the risk of financial fines, and gain visibility over all critical communications on any project or client.

Improve deliverability

Empower your project and client teams to make decisions with the correct information about scope changes, approvals, and any business-critical information which may affect their work.

Save time

Eliminate time spent hunting for information contained in emails by enabling staff to find any email related to any project or client in seconds.

Support collaboration

Provide your staff with complete visibility over everything related to their project or client, rather than just what's in their individual inbox.

Problems we solve

- Little-to-no control over project or client information that is locked in staff's individual inboxes
- Risks associated with being able to retrieve emails against a single project or client
- Email is the key form of correspondence in the company, but everyone manages it differently
- Staff are wasting time looking for the information they need to effectively do their job
- Staff leaving the business, but a range of important project or client information is lost in their inbox

“

"Better email management reduces the need for shared mailboxes, removes barriers to accessing relevant project information, and enables teams to better keep track of multiple projects."

Nick Bullock, Associate Director, IT Operations, Savills

”

Mail Manager Features

Mail Manager helps organisations to manage their business-critical correspondence.

1. Prompt and predict: Never worry about your staff not filing again! Mail Manager's AI learns your email behaviours to help prompt and predict where emails should be filed, meaning emails are filed as and when you send and receive them. Plus, you can file multiple emails at once.

2. Migration: Implement Mail Manager on live projects or clients by being able to incorporate all of your legacy correspondence easily.

3. Search: Find any email on every project or client within three clicks, whether your team are online or offline. We know better than anyone the volume of emails. Mail Manager can search through two million emails in two seconds!

4. Rapid deployment: Be up and running with Mail Manager in 24-hours! You can install the Outlook add-in and roll it out across the company in five simple steps. We also offer training and implementation support.

5. Complimentary to your infrastructure: Mail Manager is designed to fit in with your existing IT setup! You retain and store your own data, and we slot in nicely with your existing Privilege Access Management and folder set up. We integrate with Outlook and you can file to where your business files, whether that be a server, file server, SharePoint, Viewpoint or other storage solutions.

6. Social mapping: Our interactive social mapping feature makes use of your email data to give you a visual way of identifying communication trends and gaps across your company.

7. File on the go: With the Mail Manager 365 Mobile App, you can file your important emails any time, any where straight from your smartphone! Our mobile application is designed to complement the Mail Manager desktop solution by connecting correspondence between office-based and field-based teams, with on-the-go email filing, filing reminders and file-upon-send capabilities.

Companies we've helped

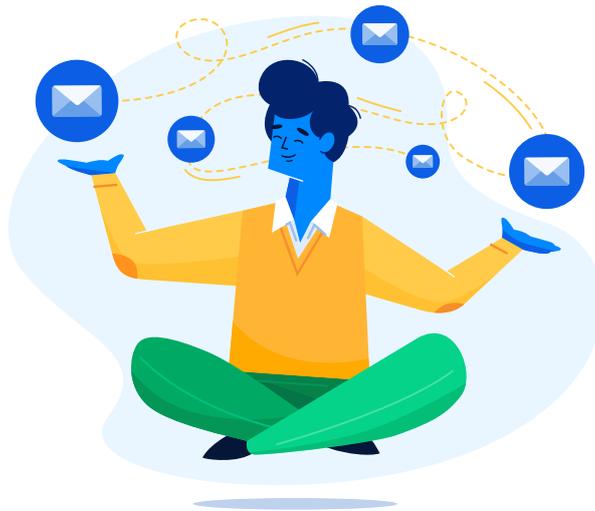

“

Mail Manager reduces our risk through improved legal compliance. With the enhanced search capabilities, we have effectively streamlined our procedure for locating and providing email documentation from a costly and time-consuming project down to a matter of a few minutes. That added security in this industry provides more than just cost savings – it provides peace of mind.

Michael Kenealy, VP and CFO at Nitsch Engineering
