

# Integrated Connected Service Vehicle Solution

There are **over 9.3 million fleet service vehicles** in the United States. Service vehicles are a valuable capital asset. With the number of assets and inventory items they carry, companies need visibility into their inventory and assets on each vehicle.

---

Apptricity's Connected Service Vehicle solution turns your day-to-day field service vehicle schedule into a mobile asset and inventory tracking system that allows you to track all your items in real-time in each vehicle. Track everything inside with our I-Connect Edge devices using RFID or Bluetooth technology. Gain daily visibility, so you can see in real-time your current inventory levels for each vehicle and find out what your field techs are using for each job assignment.

## Responsive Work Order Management

Leverage the Connected Service Vehicle solution with our Field Service Application to gain insight into work orders in real-time and determine what inventory is needed to work each job assignment. Apptricity's mobile field service application allows your technicians to view their workload for the day, receive turn-by-turn directions to the next job, and be aware of all assets and inventory within their vehicle. As technicians complete each work order, the time spent and inventory used for the job is automatically logged and updated on the cloud-based system for instant reporting and reconciliation.

## Provides Real-Time & Automatic Updates

With our integrated field services solution, you can track vehicles at any job site, the time spent, and the quantity and value of each item onboard the vehicle, no matter where they are on route. Pairing this technology with additional tagging and sensor options, you will have complete transparency into each vehicle's internal conditions for sensitive assets requiring temperature, humidity, and orientation monitoring. You can upload inventory usage reports throughout the day, virtually eliminating manual cycle counts of inventory in each vehicle at the end of the day. This automatic feature can help can **reduce labor hours by 70% or more**.

- **Upgrade Your Existing Fleet** of service vehicles with I-Connect devices or the complete Connected Service Vehicle Solution
- **Set Up Geofencing** borders that send alerts when service vehicles enter or leave a certain area, such as the lot, service station, or area of operation.
- **Get Real-Time Vehicle Diagnostics** by connecting a vehicle's OBD port to the I-Connect controllers onboard.
- **Gain Real-time Visibility** of all the assets and inventory inside each vehicle with schedule reports throughout the day, hour, or minute.
