## Manage and Track Assets Anywhere With 360-Degree Visibility From Procurement to Retirement

"We talked to Apptricity about developing a system that was tailor-made to fit our needs. They gave us what we asked for and so much more. Working together has been a really good fit."

- President and CEO,
Electrical Support Services Company

Apptricity Supply Chain Management is an integrated software solution suite that brings a new level of efficiency to your organization's management of assets, inventory, field service and warehouse operations. By streamlining and automating end-to-end management, it saves you both time and money while giving you complete visibility and control, all in real-time.

Apptricity Asset provides the 360-degree visibility and accountability that's missing in your asset management. It's a unified, easy-to-use system that integrates with your existing tracking and ERP solutions to enable granular detail specific to: maintenance repair, product warranties, lifecycle management, incident reporting (with the ability to track cost), department allocations, and depreciation. Now you can manage assets across your organization by employee, location and other variables, with online incident reporting that documents problems, tracks defects, and provides valuable information to determine asset life.

Apptricity is a leading global provider of IoT and M2M mobile enterprise solutions for supply chain management and spend management.

### Get Minute-by-Minute Visibility Status

When your organization can see asset status and location, it's amazing how things change. Stockpiling and shortages decrease, warranties are invoked, maintenance gets done on schedule. Accountability and efficiency improve – dramatically.

### Automate Your Best Practices

Every organization has their preferred way of getting things done. Apptricity software is designed to implement your unique configurations and business needs. Discover how a comprehensive asset management solution can perfectly fit your business.

### Find Assets Anywhere, Any Time

Put simply, Apptricity Asset allows you to track any asset, no matter where it's located. We help the U.S. Army and Nestle track assets around the globe— imagine what that kind of technology can do for your organization.

## Comprehensive Asset Management

Track assets when received, assigned, maintained, broken and retired, including by location, facility, and employee. You can even add, transfer and assign assets in a batch, rather than individually, for faster asset management.

## Flexible Mobile Asset Tracking

Apptricity Asset communicates with barcode scanners, RFID readers, and mobile devices to quickly and easily manage asset and inventory details and locations. Plus GPS-based mapping enables precise, interactive, global real-time tracking.

## Complete Financial Visibility

Now you can track the value and useful life of your assets with real data. With graphical lifecycle and depreciation information, you'll get real-time visibility into asset valuation and remaining service.

## Unified Inventory Control

Mobile inventory management and web-based asset tracking combine to create a single view of company owned goods. Receive and move inventory in real-time.

## End-to-End Process Management

Our powerful Work Order system enables job-based asset usage and complete MR&O processes. You get an overall view of job status, showing what's behind schedule, including what has beens assigned, along with other important information.

## Superior Customer Service

Apptricity has worked closely with the world's largest, most complex companies and organizations to meet their specific and custom needs quickly and fully: we can do it for you.

## Why Apptricity Supply Chain

+ Having a uniform interface across all supply chain functions can boost employee productivity

+ Apptricity Asset is currently tracking over 25 million assets for our customers today. Join the family.

+ Whether you're tracking ice cream freezer cases or mission-critical equipment, Apptricity can scale when you're ready.

---

### *Apptricity Asset Features*

- Automates asset assignment and categorization
- Manages warranties and service agreements
- Facilitates maintenance, repair and operations tracking and scheduling
- Enables real-time exceptions and incident reporting
- Adapts to match your business rules, systems and workflow

- Tracks and reports ownership, leases, depreciation and chain-of-custody history
- Enables condition-based testing, maintenance and scheduling
- Automates maintenance work order processing via Apptricity Work Order
- Provides global visibility into financial, operational, and lifecycle performance
- Provides real-time reporting on costs of asset ownership

- Facilitates forward asset reservation, allocation and transfer
- Maintains an upcoming maintenance schedule
- Automates and streamlines business processes for asset reclassifications, transfers, disposals and other standard asset-accounting tasks
- Uses cellular and satellite GPS, RFID and barcode technologies to streamline and automate data acquisition

---

### Total Integration with Every Solution

Our software integrates with any Enterprise Resource Planning (ERP) system, including Oracle, SAP, Banner, PeopleSoft, Lawson, Epicor, Sage and QuickBooks. We also will quickly develop custom interfaces for your other systems. Through Agile implementation, you have the choice of either on-premise or in a SaaS model, which dramatically speeds up implementation.

**Take a closer look at how organizations like yours are leveraging Supply Chain Management to get ahead of their competitors, make more informed decisions and improve their ROI.**
