💡 ITSACHECKMATE SOLUTION

Integrate Online Orders and Sync Your Menus

ItsaCheckmate provides true end-to-end integration between DoorDash and over 50 different POS systems. ItsaCheckmate syncs the menus and pricing directly from the POS system to the public facing menu on DoorDash, and integrates orders from DoorDash back into the restaurant's existing POS system. Orders will print automatically in the kitchen or show up on KDS screens in real time. ItsaCheckmate also provides a menu management layer in between, allowing customers to 86 items, update prices, manage images and make menu changes across all of their third party platforms from a single source.

Results:

- Remove the need for tablets & reduce labor costs
- Manage third party menus from a single location and 86 items in real time
- Reduce order errors, refunds and chargebacks

Customer Support

Your operations are secured by a 24/7 support team that monitors the health of your online order flow to the kitchen and a customer team that creates and maintains the bridge between your ideal online menu and your POS.
