

SOC AS A SERVICE

Prioritizing Cybersecurity with a Robust Business Strategy

The demand for digital transformation has fostered widespread, fast-paced enhancements to network efficiencies, business operations, and customer experience, but it has simultaneously increased security vulnerabilities and attack surfaces. Now, more than ever, securing your company's data, systems, and assets from potential cyberattacks is the vital business strategy that every organization needs to prioritize. As cyberattacks only continue to increase, business leaders are tasked with making sure they have a team of cybersecurity experts able to recognize threats, defend against attacks, and prevent future vulnerabilities.

TenFour's Security Operations Center (SOC) as a Service provides advanced security intelligence and insight into the potential threats and vulnerabilities in your system. Our expert security analysts constantly monitor your environment, hunting for threats and detecting anomalies through data collection and analysis augmented with mature artificial intelligence and machine learning capabilities.

Delivering extended threat detection and incident response through 24/7 security monitoring, TenFour's solution achieves broader visibility by gathering arbitrary data and logs across multiple sources, including endpoints, network, infrastructure, application, data, and identity. This comprehensive approach ensures that all threat surfaces are covered, resulting in enhanced security posture for your organization.

Key Benefits of TenFour's SOC Solution

Security Expertise

Not all businesses are able to staff an internal SOC with cybersecurity professionals. Our team of experienced security analysts will act as your external, cloud-based SOC experts, constantly hunting for threats, vulnerabilities, and anomalies in your system and ready to suggest or perform appropriate remediation where needed.

Broader & Deeper Visibility

We provide real-time detection and response by incorporating tools such as security orchestration, automation, and response (SOAR); user and entity behavior analytics (UEBA); machine learning; and threat intelligence, which help to achieve reductions in false alerts and enhanced threat detection, response, and recovery.

Break Down Cybersecurity Silos

By gathering data from different sources, including endpoints, network, infrastructure, application, data, and identity, we're able to break down the departmental silos of people, process, and technology, covering all threat surfaces and resulting in better organizational security posture.

Meet Regulatory Compliance & Industry Standards

As rules and regulations continue to evolve among governing bodies, TenFour's SOC as a Service ensures your operation stays abreast and compliant with all applicable regulations, standards, and guidelines. No need to worry about keeping on top of regulatory changes or dealing with hefty fines for noncompliance.

A Solution to Secure Every Business

TenFour's SOC solution is aptly designed with high-level service features to meet all your security requirements and concerns. Through sophisticated security awareness, we've made sure all the bases are covered to safeguard your network and keep your business protected. As a streamlined, subscription-based service, our Premier Security Package is available for purchase at a simple monthly cost.

PREMIER SECURITY PACKAGE

This SOC as a Service package comprises the following service features:

- 24/7 monitoring by expert security analysts
- Enhanced threat detection and analysis
- Continuous intelligent feeds
- Deep search, filtering, and forensic analysis
- Support for public, private, and hybrid clouds
- Agent and agentless connectivity
- Enterprise-class log management
- Default data retention policy of one year (with additional storage options available)
- Advisory threat score
- Risk map
- Customizable dashboard with drill-down capabilities
- Full remediation
- Audit & compliance support
- Access to a reports library with over 120 reports
- Monthly security overviews & executive summary meetings
- Time-to-notify SLO
- Time-to-remediate SLA

**Service features may be customized based on the quantity of data reporting sources.*

ADD-ON FEATURES

In addition to the package features above, TenFour offers supplemental services for an enhanced understanding of your business's existing security posture and mitigation strategies.

Security Add-Ons:

- Vulnerability scanning
- Penetration testing

Network Add-On:

- Asset discovery & management

Additional Network and Communications Services

Our SOC solution is built to provide expert security intelligence with 24/7 threat detection and incident response, but we know that running the digital operations of a business requires more than security operations. That's why TenFour has created end-to-end network and communications services that tackle every business challenge while supporting business innovation. In addition to the SOC capabilities described, TenFour's service can be enhanced with any number of the business technologies we provide, including:

Networking
Our Network as a Service delivers wired and wireless local area network (LAN), wide area network (WAN), and business-grade internet.

Communications
Our Unified Communications as a Service provides phones, video endpoints, collaboration software, and applications licenses.

Internet of Things
Selection, integration, monitoring, and support of IoT-enabled devices, such as security cameras, access control, sensors, and more.

Physical Infrastructure
Complete cable installation, power management services, and equipment organization to ensure everything is powered up and connected.

Ready to Refine Your Security Posture?

Whether you have a single facility or a multicloud, global organization, TenFour's security experts are prepared to help protect your sensitive information and critical assets. With each TenFour service deployment, we make it as easy as possible to get your solution up and running. Our team is ready to design and deploy the SOC service that best suits your business's needs. With each service we provide, we start with the following steps:

1. **We meet to understand your business's goals and current technology environment.** If necessary, we'll conduct an in-depth discovery to assess your network operations, then compare the results with your desired outcome and build a SOC solution to fit those parameters.
2. **We present you with a simple, logical proposal.** This proposal will outline in clear terms what your business will receive with our SOC as a Service as well as the monthly cost.
3. **We initiate installation upon agreement.** Once you've signed the proposal, we're ready to deploy. Our team will work with yours to integrate our SOC as a Service into your business operation.
