

GO BEYOND

MEDIUM-HEAVY OIL

A solid version of Coercion™ MXC powers the impressive Forge™ Flare. "It is so strong, that some high rev rate players are forced to use fiercely steep angles and sometimes throw it over the front of the lane to use it, even on fresh", said PBA® Tour Rep Brett Spangler. "It just makes sense to merge this phenomenal shell with a higher RG core and less aggressive finish." And that is precisely the design focus behind the Trident™ Horizon.

COERCION™ MXC HYBRID REACTIVE

Utilizing a hybrid edition of Coercion™ MXC cover technology, the Trident™ Horizon exudes strength, power, and incredible versatility. This cover allows the Trident™ Horizon to dig in the oil yet still manage to continue down lane.

SIDEWINDER™ WEIGHT BLOCK

The versatile asymmetric Sidewinder™ core clears the front of the lane much easier than the more powerful solid balls and retains energy to provide ferocious continuation.

4000 GRIT LSS FINISH

Tuned with a 4000 Grit LSS finish, it showcases more clearly the down lane motion potential of the Coercion™ MXC technology.
