

# Never let a disaster bring you down. Ever.

## Proteus

Built for the Operational Technology environment, Proteus, a managed disaster resilience service from SolutionsPT makes sure your business is unstoppable no matter what happens; protecting, securing and recovering your data with ease.

### Why you need disaster recovery

- If your plant process went down, how long do you think it would take to get back to business?
- What would it cost in lost production, reputation, and money?
- Sometimes a problem affects your system that can't be fixed and a complete rebuild is needed.
- With Proteus, down time doesn't mean disaster, you can recover and be back to business in minutes.

#### **Swift, Easy, Reliable.**

SolutionsPT back-up your data, and can perform a rapid restore in minutes, making recovery from any downtime swift and easy. With an OT expert available to you at all times, we can get you back to business in no time.

#### **Reduce your workload.**

Spend your time where you're needed most and let us look after your data. With an annual recovery audit you can be confident that should anything go wrong we're prepared and ready to keep you up and running.

#### **Designed for the OT environment.**

Most recovery solutions aren't made to fit OT environments. Proteus was built with OT in mind, integrating seamlessly with your manufacturing processes, to provide complete disaster resilience without getting in the way.

### **Down-time? Blink and you'll miss it**

Keep Running No Matter What Happens: With a SolutionsPT engineer available to you at all times.

With 24/7 disaster resilience service, support, and using the latest IT technology from SolutionsPT — you can focus on your business safe in the knowledge that a disaster doesn't mean downtime.

### Datto Hybrid Cloud

Renowned for its innovative technology and a superior level of reliability within the IT world, Proteus utilises Datto Hybrid Cloud technology to improve redundancy, and give you an extra layer of protection over systems and data. An on-site vault protects data across the Local Area Network (LAN) while it is simultaneously and automatically transmitted to the secure cloud for secure storage.

### Proteus Image-based Back-up

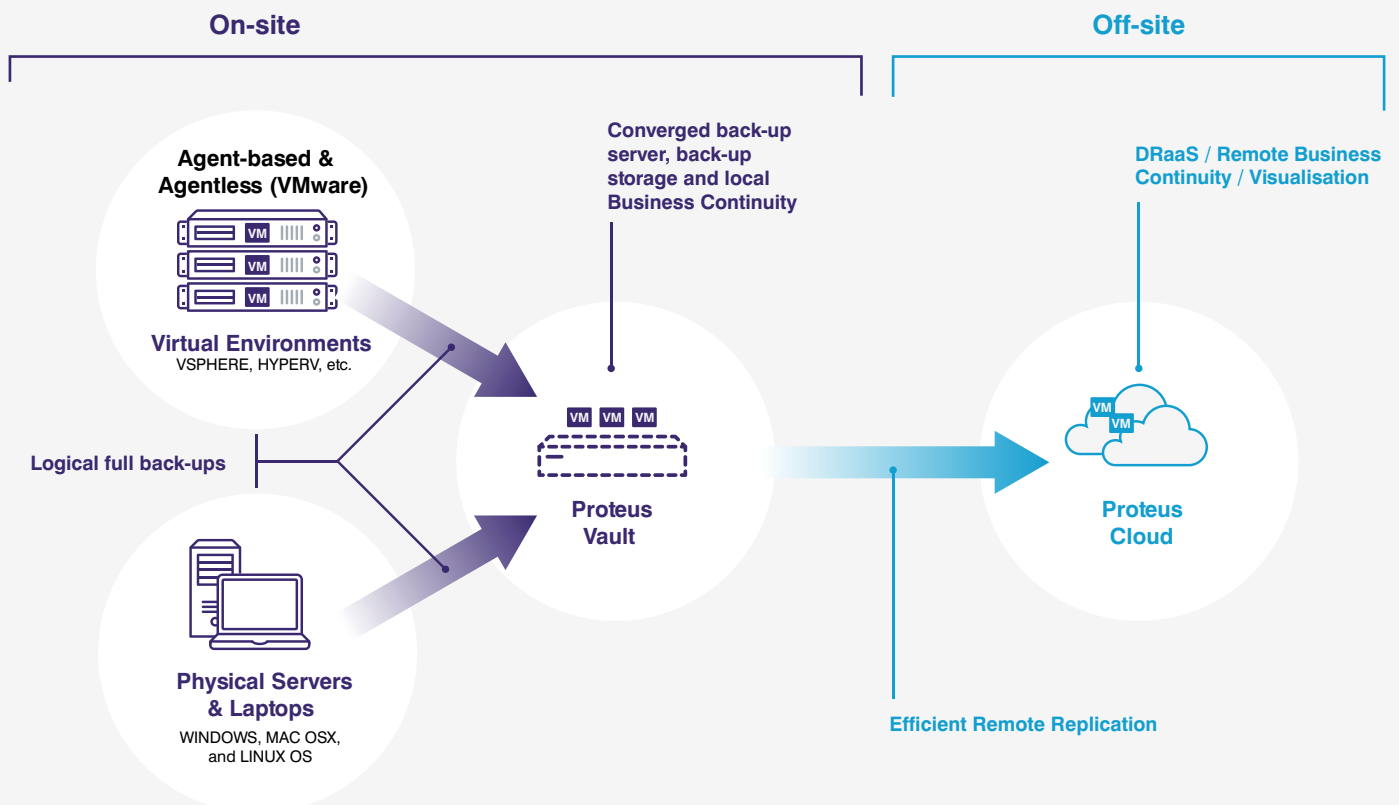

We take a direct image of your system and store it, ready to go for a quick, full system restore should you ever need it. That means you always have a proven, fully working system ready to rely on.

### Virtualisation

If there's a situation where you cannot get into your system or site, Proteus' solutions allow you to manage and operate your business as usual from another device or location. With both local and off-site virtualisation, our service lets you get to work without experiencing downtime.
