

AVG Secure VPN (Multi-Device)

Total online privacy in a single click for all your devices

Protect your privacy

Block websites and advertisers from seeing your real I.P. address, disguise your location, and browse privately. AVG Secure VPN doesn't log the websites you visit or the apps you use.

Secure any Wi-Fi

Public Wi-Fi and unsecured networks just aren't safe. With AVG Secure VPN on, any data you send or receive is encrypted to hide it from prying eyes and protect it from hackers.

Access content worldwide

Avoid online censorship and access content from around the world. AVG Secure VPN lets you experience the internet you want from wherever you are.

For Windows 10, 8, 7, Mac OS, iOS and Android

What is a VPN?

Antivirus protects from malware. A Virtual Private Network (VPN) protects your connection. With AVG Secure VPN, a single click secures your entire internet connection with bank-grade, 256-bit AES encryption to prevent advertisers, employers, government agencies, and even hackers from eavesdropping on what you do online.

Why you need a VPN

Everyone deserves online privacy, security, and freedom. With a VPN, you can safely connect to any network and surf the web anywhere, anytime, having access to any site — no matter where you are.

Is free Wi-Fi your lifeline?

If you make credit card payments, check emails, or use social media from public Wi-Fi, you need a VPN.

Do you work remotely?

Big companies use VPNs to protect their communications and documents. Now so can you.

Need access to other countries?

Can't reach your favorite websites or TV shows from your location? A VPN gets you around the restrictions.
