

# WORKDAY EXTEND

Leverage the Extend toolset to build custom applications that provide a uniform end user experience and use your Workday security model to secure data.

## TAILOR WORKDAY TO FIT YOUR NEEDS

With Workday Extend, you can build custom applications to create new experiences and workflows within your Workday application. The product can blend external data safely and securely in the Workday application or have your external applications access Workday data without the need to store and update your Workday data externally.

## THE COLLABORATIVE DIFFERENCE

Collaborative’s approach to Extend focuses on true partnership. We recommend that a certified Extend Implementation Partner build your first application to quickly develop and deploy new capabilities with Extend. Collaborative’s consultative sessions provide your technical team with hands-on experience in areas such as data retrieval/security, page scripting, posting transactions, and page flows. As knowledge transfer continues and Workday continues to develop the Extend toolset, Collaborative will continue to advise and assist your team to build Extend applications.

- Collaborative Solutions is a certified Workday Extend deployment partner, holding the highest level of Extend certification (Skilled).
- As Workday Extend customer #16 Collaborative has been leveraging Workday Extend from the beginning with the Early Adopter and Fast Follower programs.
- Collaborative has 10 certified consultants and 2 product leads.
- Collaborative has supported and developed over 20 applications for customers across several industries, including professional business services; CPG, retail, & hospitality; banking & financial services; manufacturing; and healthcare.
- Collaborative uses Workday Extend internally and was one of the first partners to showcase an application through its job project board application.
