

Name of Waste (as described on the Material Characterization Form – MCF): _____

PLEASE NOTE: In order to profile waste into Covanta's Virginia facilities, this form must be completed in its entirety for permit compliance purposes. Review the list of HAPS below, answer questions 1-3 at the end of this document, sign and date the form. Submit this form with the completed Covanta Material Characterization Form and supporting analysis to Covanta, if applicable.

For all listings above which contain the word "compounds" and for glycol ethers, the following applies: Unless otherwise specified, these listings are defined as including any unique chemical substance that contains the named chemical (i.e., antimony, arsenic, etc.) as part of that chemical's infrastructure.

- **^{^1}** X'CN where X = H' or any other group where a formal dissociation may occur. For example KCN or Ca(CN)₂
- **^{^2}** Includes mono- and di- ethers of **ethylene glycol**, **diethylene glycol**, and **triethylene glycol** R-(OCH₂CH₂)_n-OR' where n = 1, 2, or 3
R = alkyl C7 (chain of 7 carbon atoms) or less; or phenyl or alkyl substituted phenyl
R' = H or alkyl C7 or less; or OR' consisting of carboxylic acid ester, sulfate, phosphate, nitrate, or sulfonate. Polymers are excluded from the glycol category, as well as surfactant alcohol ethoxylates (where R is an alkyl C8 or greater) and their derivatives, and ethylene glycol monobutyl ether (CAS 111-76-2).
 - **^{^3}** Includes mineral fiber emissions from facilities manufacturing or processing glass, rock, or slag fibers (or other mineral derived fibers) of average diameter 1 micrometer or less.
 - **^{^4}** Includes organic compounds with more than one benzene ring, and which have a boiling point greater than or equal to 100 °C.
 - **^{^5}** A type of atom which spontaneously undergoes radioactive decay.

Question 1. Based on the previous list, are there any HAP's present in this waste?

NO No HAP's are used in the generation of the waste described here and no reactions are expected to generate HAP's.

YES Please list those in the space below with their respective concentrations.

Question 2. How was the previous answer determined?

Generator knowledge The person signing off on this certification attests that s/he understands the generating process and can certify whether HAP's are present or not.

Analysis Please provide any analysis reports used to make this determination.

Hazardous Air Pollutant (HAP)

Concentration (mg/L)

Question 3. Is the generator of this waste a categorical business as defined in 40CFR Chapter I, Subchapter N, Parts 405-471?

NO The generator of this waste is not considered a categorical business.

Is the by-product waste from this generator's categorical water treatment RCRA hazardous waste?

NO YES

YES Is the by-product waste from this generator's categorical water treatment part of the waste described here?
If so

□ NO □ YES

If both these answers are 'YES', the waste profiled here is not acceptable for disposal at Covanta EFW facilities.
